### PROPOSAL

DATE : 2/29/2024  
TO : Shane Fischer – SCS Engineers  
FROM : Ralph Calistri (floridajetclean@yahoo.com)  
SUBJECT : Leachate Collection System Maintenance at Pinellas County Landfills

Thank you for your inquiry. We confirm our capability and interest in carrying out this work for SCS Engineers at the Pinellas County Landfills.

**FLORIDA JETCLEAN** specializes in leachate collection system maintenance and inspection, and has developed a considerable amount of specific expertise in this field over the last 35+ years. Our company has worked at an extensive number of landfills in Florida, Georgia, the Carolinas, Delaware, and westward to Arkansas. We have worked with most engineering companies active in this field, and have also fostered excellent working relationships with the regulatory authorities. We use modified jetting equipment designed to achieve extended pipe distances found in landfill environments and our explosion proof camera equipment complies with OSHA and regulatory mandates for methane environments. Substantial references are available on request.

- 1) **Florida Jetclean, Inc. is consistently successful in Leachate pipe cleaning because of our ability to address extended distances from a single point of entry.** Typical lower-end equipment is designed for much shorter pipes in sewer environments and is just not capable of distances required in Leachate collection systems. We will provide very capable, high-end equipment, and seasoned operators to help ensure success. Our current distance record from a single point of entry is 1,650’.
- 2) Florida Jetclean, Inc. uses only **explosion proof** (certified Class 1, Division 1, Gas Groups C & D) tractor-driven or push-rod video inspection equipment. **THIS CERTIFICATION IS MANDATED BY OSHA IN METHANE PIPING.** Our equipment and procedures fully meet OSHA and DEP requirements, and **we will put it in writing.**

*Our proposal to provide high-pressure water-jetting, explosion-proof video-inspection, and vacuum truck services on the leachate collection system piping at the Pinellas County Landfills, is as follows:*

- |  |                  |
|--|------------------|
| 1) High-Pressure Water-Jetting Services (Up to 4,000 PSI)  | \$ 350.00 / Hour |
| 2) High-Pressure Water-Jetting Services (Up to 10,000 PSI) | \$ 400.00 / Hour |
| 3) Explosion-Proof Video Inspection Services               | \$ 400.00 / Hour |
| 4) Vacuum Truck Services                                   | \$ 450.00 / Hour |

The proposal is subject to the following:

- Hourly rates are fixed for the 5 year contract period, and are fully burdened / loaded.
- An adequate, no charge, on site water supply for all jetcleaning services.
- An on site no charge, disposal location for all vacuum truck services.
- 2 wheel drive vehicle access within 10'-15' of each cleanout or manhole
- Exposed and opened cleanouts/manholes at ground level
- All jetting and video-inspection efforts will begin at the available pipe access locations and will continue through the piping as far as possible. Full coverage may or may not be possible through the existing access.
- Our equipment and procedures fully meet OSHA and DEP requirements. In particular our video inspection equipment is certified Class 1, Division 1, Groups C & D (i.e. explosion proof). This is mandated in methane piping by OSHA.
- Video/jetting logs and reports together with video footage on flash drive or via download link will be provided after completion.

Regards,

Ralph Calistri – Florida Jetclean

**SECTION E – SCOPE OF SERVICES****SECTION E – SCOPE OF WORK****A. OBJECTIVE:**

Solid Waste requires professional engineering consulting services associated with landfill management and other related landfill ancillary facilities, programs, projects, and other related activities on an as needed basis.

**B. BACKGROUND:**

The County owns two (2) landfills; the active Bridgeway Acres (BWA) Landfill that includes a Class I area and a Class I Non-Putrescible area, and the closed Toytown Landfill. The County's Solid Waste Management Facility also includes a scale facility; an administrative building; a mini-transfer station for individual citizen waste deliveries; a household chemical collection center; a yard waste/mulching operation; and other appurtenant facilities. The site also includes 3,150 tons per day waste-to-energy (WTE) facility, a 2.0-million-gallon water per day (mgd) industrial water treatment facility (IWTF) and a metals recovery facility. The WTE facility is not included in the scope of work. The Solid Waste Management Facility is managed by the County Solid Waste Department (SWD). In the year 2022, the County received over 1,140,000 tons of solid waste at the facility. DSW also manages an artificial reef construction program and recycling drop-off program. The BWA Landfill is an approximately 705-acre slurry wall-lined landfill. The Class I landfill primarily receives ash from the WTE facility and by-pass waste. Waste Management operates the Class I and Class III landfills, under contract to the County. The Toytown Landfill is a 235-acre closed slurry wall-lined Class I landfill. Both landfills have extensive ground and surface water monitoring programs, gradient control systems, and stormwater management facilities.

**C. SCOPE OF WORK:**

The scope of services outline herein is the minimum scope of work to be provided. Work to be performed by the selected CONSULTANT shall be on a negotiated, written assignment-by-assignment basis and shall include a "not to exceed" budget amount for the assignment. Work assignments will be prepared by the COUNTY's Operations Division Manager or Program Manager and approved by the Director of the Department of Solid Waste.

The selected CONSULTANT will provide independent Engineering Consulting Services related to the needs of the COUNTY Department of Solid Waste. The work may include but is not limited to the following:

Contract Compliance Monitoring - Review and monitor landfill operator performance and compliance with the provisions of the operating contract. Work includes assisting the COUNTY in negotiating change orders and other changes to the operating contract. Prepare written performance assessment reports.

Permit Assistance – Assist the COUNTY in preparing permit applications and the renewal of environmental permits required for system operation including solid waste operating permits, wastewater, stormwater, mulch, Title V and any other permits required for the construction and operation at the facility. Review existing permits and advise of potential changes to reflect current operations or impacts on proposed programs or facilities. Assist with the preparation and delivery of permit modifications. Attend meetings with state regulators, as required.

Design Engineering – Design of facilities and systems as may be required including landfill expansion areas, landfill closure, stormwater facilities, landfill gas systems, waste processing and transfer facilities, roadways and monitoring systems. Engineering and design may also include site water management controls and automation. Work may include design, drawings, specifications, and assistance during bidding, and construction administration services.

Construction and Engineering – construction administration and engineering services as an independent third party where the CONSULTANT was not the designer to ensure work is completed per specifications.

Future Needs Projections – Provide landfill life expectancy evaluations and air space utilization calculations including compaction. Assist in preparing solid waste quantity projections.

Environmental Monitoring – Assist the COUNTY in conducting environmental monitoring programs including evaluation and analysis of results, FDEP report generation and making recommendations. This work includes evaluating the gradient monitoring program including hydrology with special consideration to hydrogeological influences and the negative gradient required on the site by permit conditions. Work may include assessment of the slurry wall.

System Improvements – Analyze and recommend improvements to existing facilities and operations, and management programs. Services include preparation of conceptual analyses, layouts and engineers estimate of construction and

operating costs estimates. Assist the COUNTY in evaluating new technologies or systems that may be applicable or offer viable improvements to the COUNTY's solid waste system.

Landfill Operation – Evaluate and update landfill operating plans including fill sequencing, alternative cover materials, alternative landfill design options, odor and dust control, stormwater/leachate drainage, and alternative maintenance strategies. Assess existing site infrastructure operations to include erosion control and maintenance of ditches, site water storage capacity, and alternative options for improved site water quality.

Landfill Closure – Evaluate and update closure plans and long-term care programs including the preparation of permit applications, as applicable. Assist the COUNTY in evaluating end use options for closed landfill areas including solar power.

Financial Assurance – Provide closure, post closure and long-term care cost estimates. Assist the COUNTY in preparing financial assurance compliance reporting.

Landfill Gas Monitoring – Calculate and/or monitor emissions from the landfills to determine compliance with Title V air quality regulations. Provide engineering services for active gas extraction and potential energy recovery or reuse opportunities.

Landfill Expansion Planning - Assist with planning the expansion of the South Landfill cell as it reaches its permitted capacity. Identify all interferences and conflicts with this expansion and the engineering services for relocation, realignment, preparation and other site modifications to accommodate this expansion.
