Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *PINELLAS* County: **3**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *PINELLAS* County

No Measures/Homes:	185
Arithmetic Mean:	0.4
Standard Deviation:	0.4
Maximum:	4.4
% >4 pCi/L:	0.5
% >8 pCi/L:	-
% >12 pCi/L:	-
Notes on Data Table:	TABLE 2. Indoor radon results from the Florida population-based radon survey, by county.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. NWIS database information is obtained through the Water Quality Data Portal (WQP).

Wells from NWIS — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This select NWIS Wells dataset contains specific Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well, Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern. Applicable NWIS database information is obtained through the Water Quality Data Portal (WQP).

Appendix

State Sources

Florida Subsidence Incident Reports — **SINKHOLES**

A list of Florida Subsidence Incidents made available by the Florida Department of Environmental Protection (DEP) and maintained by the Florida Geological Survey. Sinkholes are closed depressions in areas underlain by soluble rock such as limestone, dolostone, and in some states gypsum and salt. Other subterranean events can cause holes, depressions, or subsidence of the land surface that may mimic sinkhole activity. Commonly, a reported depression is not verified by a licensed professional geologist to be a true sinkhole, and the cause of subsidence is not known. Such an event is called a subsidence incident.

Oil and Gas Wells — **OGW**

The Oil and Gas Program is the permitting authority within the Florida Department of Environmental Protection's Mining and Minerals Regulation Program. Companies interested in exploration or production of hydrocarbons in Florida are regulated by the Oil and Gas Program. This data is made available by Florida Department of Environmental Protection's Oil and Gas program.

Public Water Supply Wells — **PWSW**

The Public Water Supply Wells (PWSW) data consist of public water supply facilities and their wells in Florida, excluding Federally owned facilities. This data is made available by Florida Department of Environmental Protection, Water Compliance Assurance Program.

Underground Injection Control Wells — **UIC**

Class I Underground Injection Control (UIC) wells that are currently or were previously active, as well as proposed sites, regulated by the Florida Department of Environmental Protection (FDEP). Class I UIC wells are used to inject nonhazardous waste, hazardous waste (new hazardous waste wells were banned in 1983), or municipal waste below the lowermost underground source of drinking water.

Water Use Permits Sites - South Florida Water Management District — **WELLS**

List of Water Use Permitting Facilities consisting of wells, pumps and culverts, made available by the South Florida Water Management District. The facilities represent a subset of all wells, pumps and culverts associated with Water Use Permits. A Water Use Permit is required for all water uses except single family and duplex use and fire fighting.

Water Well Completions - Northwest Florida Water Management District — **WATER WELLS**

A list of existing well permits provided by the Northwest Florida Water Management District, representing records for wells permitted for construction/repair/abandonment beginning in the year 1976; does not typically contain data on wells constructed prior to 1976. The data provided may therefore only represent a fraction of existing wells. The data are provided by water well contractors on completion reports and, in most cases, has not been verified by District staff.

Water Well Completions - St. Johns River Water Management District — **WATER WELLS**

A list of wells in the Water Well Completion Report database made available by the St. Johns River Water Management District (SJRWMD). The SJRWMD advises that data reported in the Water Well Completion Report are obtained from multiple sources, including SJRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SJRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Water Well Completions - Suwanee River Water Management District — **WELLS**

A list of wells in the Water Well Completion Report database made available by the Suwanee River Water Management District department (SRWMD). The SRWMD advises that data reported in the Water Well Completion Report are obtained from multiple sources, including SRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Water Well Construction Permits — **WELL CONST PERM**

A list of water well construction permits issued by the St. Johns River Water Management District (SJRWMD).

Appendix

Water Well Construction Permits - Southwest Florida Water Management District **WATER WELLS**

Locations of well construction sites permitted within the District, including historical sites. A Well Construction Permit is required prior to installation of a water well within the District. The permits ensure that wells are constructed by qualified contractors and meet rigid safety and durability standards.

Water Wells - Suwanee River Water Management District **WATER WELLS**

A list of water wells made available by the Suwanee River Water Management District department (SRWMD). The SRWMD advises that data are obtained from multiple sources including SRWMD, delegated counties, and other regulatory agencies; that they cannot assure that contributors have used consistent measurement techniques or adhered to approved quality control standards; and that, although the SRWMD has made reasonable attempts to assure the quality of the data contained herein, in most cases, the information is reported as received.

Well Surveillance Program Water Wells **WATER WELLS**

A list of privately and publicly owned potable wells from the Florida Department of Health's (DOH) Well Surveillance Program.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Subject: Phase II Subsurface Investigation Report
CBRE-PIES-Pinellas County
13600 ICOT Blvd
Largo, Florida 33760
Partner Project No. 23-420796.4

Dear Ms. Korst:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the assessment performed at the above-referenced property. The following report describes the field activities, methods, and findings of the Phase II Subsurface Investigation conducted at the above-referenced property.

This assessment was performed consistent with acceptable industry standards. The independent conclusions represent Partner's best professional judgment based upon existing conditions and the information and data available to us during the course of this assignment.

We appreciate the opportunity to provide these services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact Jason Lind at 303-276-3139.

Sincerely,

Partner Engineering and Science, Inc.

1.0 INTRODUCTION

1.1 Purpose

The purpose of the investigation was to evaluate the potential impact of petroleum hydrocarbons, volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), and/or metals to soil and/or groundwater as a consequence of a release or releases as a result of former on-site automobile repair and service activities. CBRE Public Institutions & Education Solutions provided project authorization of Partner Proposal Number P23-420796.4.

1.2 Limitations

This report presents a summary of work conducted by Partner. The work includes observations of site conditions encountered and the analytical results provided by an independent third-party laboratory of samples collected during the course of the project. The number and location of samples were selected to provide the required information. It cannot be assumed that the limited available data are representative of subsurface conditions in areas not sampled.

Conclusions and/or recommendations are based on the observations, laboratory analyses, and the governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Partner warrants that the environmental consulting services contained herein were accomplished in accordance with generally accepted practices in the environmental engineering, geology, and hydrogeology fields that existed at the time and location of work. No other warranties are implied or expressed.

1.3 User Reliance

Partner was engaged by CBRE Public Institutions & Education Solutions (the Addressee), or their authorized representative, to perform this investigation. The engagement agreement specifically states the scope and purpose of the investigation, as well as the contractual obligations and limitations of both parties. This report and the information therein, are for the exclusive use of the Addressee. This report has no other purpose and may not be relied upon, or used, by any other person or entity without the written consent of Partner. Third parties that obtain this report, or the information therein, shall have no rights of recourse or recovery against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, the Addressee and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of, and commitment to, these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at http://www.partneresi.com/terms-and-conditions.php.

2.0 SITE BACKGROUND

2.1 Site Description

The subject property consists of one parcel of land comprising 20.05 acres located at the northwest corner of the intersection of Ulmerton Road and Icot Boulevard within a residential and commercial area of Largo, Pinellas County, Florida. The subject property is currently developed with two commercial buildings and is occupied by various tenants for office and storage use. In addition to the current structures, the subject property is improved with paved parking and driving areas, sidewalk areas, landscaping, and drainage features. A portion of a stormwater retention pond occupies the northeast portion of the subject property.

The subject property is bound by Ponded wetland area followed by Clearwater Ice Arena and a mobile home community to the north, Icot Boulevard followed Holiday Inn, Mugs Sports Bar, and commercial strip shopping center to the east, Ulmerton Road followed by Steinway Piano, Rock's Moving Company, and The Shed Store to the south, and a mobile home community to the west. Refer to Figure 1 for a site vicinity map showing site features and surrounding properties.

2.2 Site History

Partner completed a *Phase I Environmental Site Assessment Report* (Phase I) for the subject property, dated September 29, 2023, on behalf of CBRE Public Institutions & Education Solutions. According to the reviewed historical sources, the subject property was undeveloped as of 1921; the northern portion appeared to be developed as pastureland from at least the 1960s to the 1980s; and was developed with the current buildings in 1997. The subject property has been occupied by Autonation USA (2000); Autoway Nissan / Republic Industries (2003-2012); Community Health Solutions of America LLC / Republic Industries (2016); and Various Professional Listings including Community Health Solutions of America LLC / Sgic Insurance (2020-Present).

The following recognized environmental condition (REC) was identified in the Phase I:

- The subject property was utilized as an automobile sales and service facility from 1997 to *circa* 2013 and operated with approximately 18 in-ground hydraulic lifts, aboveground storage tanks (ASTs), and a vehicle wash bay. At the time of the Phase I site reconnaissance, approximately 18 in-ground hydraulic lifts were observed in the central portion, a camper was parked within the vehicle wash bay, and ASTs no longer appeared to be present on-site. The historical operations conducted on-site are environmentally-sensitive in nature and represented a REC.

2.3 Geology and Hydrogeology

Review of the United States Geological Survey (USGS) *Saint Petersburg, Florida* Quadrangle topographic map indicates the subject property is situated approximately 14 feet above mean sea level, and the local topography is sloping gently to the east. Refer to Figure 2 for a topographic map of the site vicinity.

The geology of peninsular Florida consists of shallow tropical, marine carbonate sediments, corralline (coral reef) limestone, and sand in complex interbedded relationships reflecting changing sea levels and depositional environments during and since the Pleistocene. A younger veneer of discontinuous layers of organic-rich silts and sands overlie marine sands and shell, which, in turn, overlie massive carbonate formations. The surficial deposits are sandy soils and unconsolidated marine medium quartz sand.

Based on borings advanced during this investigation, the underlying subsurface consists predominantly of brown and tan fine- to medium-grained sand from the ground surface to approximately five feet below ground surface (bgs), the maximum depth logged. Groundwater was encountered during this investigation between 5 and 6 feet bgs. Refer to Appendix A for boring logs from this investigation.

3.0 FIELD ACTIVITIES

The Phase II Subsurface Investigation scope included a private utility clearance and the advancement of 16 borings (SB-1 through SB-16) to collect representative soil and/or groundwater samples. Refer to Table 1 for a summary of the borings, sampling schedule, and laboratory analyses for this investigation.

3.1 Preparatory Activities

Prior to the initiation of fieldwork, Partner completed the following activities.

3.1.1 Utility Clearance

Partner notified Sunshine 811 to clear public utility lines as required by law at least two business days prior to drilling activities. Sunshine 811 issued ticket number 292305548 for the project.

In addition, Partner subcontracted with Proscan Subsurface Imaging Inc. (ProScan) on October 30, 2023 to clear boring locations of utilities. Proscan systematically free-traversed each proposed boring location with a GSSI SIR 3000 ground penetrating radar (GPR) unit with a 400mhz antenna, and a utility locator with line-tracing capabilities and the data was interpreted in real time for evidence of utility lines and/or other subsurface features of potential concern. Based on the findings of the GPR survey, no subsurface utilities were identified within the proposed boring locations. One boring (SB-6) was moved to evaluate a concrete pad of unknown former use north of the northwest corner of the building.

3.1.2 Health and Safety Plan

Partner prepared a site-specific Health and Safety Plan, which was reviewed with on-site personnel involved in the project prior to the commencement of drilling activities.

3.2 Drilling Equipment

On October 30 and 31, 2023, Partner subcontracted with JAEE Environmental Services, Inc. (JAEE), a Florida-licensed driller, to provide and operate drilling equipment. JAEE, under the direction of Partner, advanced borings SB-1 through SB-16 with two track-mounted Geoprobe Model 5410 direct push rigs. Sampling equipment was decontaminated between sample intervals and boring locations to prevent cross-contamination.

3.3 Sample Locations

Borings SB-1 through SB-3 were advanced west, south, and north of an oil/water separator (OWS) north of the garage, respectively. Borings SB-4 and SB-7 were north and south of the car wash bay, respectively. Borings SB-5 and SB-16 were advanced immediately north and inside of the former AST and air compressor room, respectively. Boring SB-6 was advanced south of a concrete pad northwest of the building. Borings SB-8, SB-9, and SB-10 were advanced in the north-central portion of the garage/shop near hydraulic lifts and a trench drain. Boring SB-11 was advanced in the northeast portion of the garage/shop near a hydraulic lift and a trench drain. Borings SB-12 and SB-13 were advanced in the southwest corner of the garage/shop near hydraulic lifts and a trench drain. Borings SB-14 and SB-15 were advanced in the south-central portion and southeast corner of the garage/shop, respectively, near hydraulic lifts and a trench drain.

Refer to Figure 3 for a map indicating sample locations.

3.4 Soil Sampling

Borings SB-1 through SB-7 were overlain by asphalt, and borings SB-8 through SB-16 were overlain by concrete, which was penetrated using a punch bit attachment advanced by the direct-push drill rig. Borings SB-1 through SB-16 were advanced to terminal depths of 9 feet bgs.

Soil samples were collected using a 5-foot long by 2.25-inch diameter MacroCore sampler with a 5-foot long acetate liner, which was advanced by the direct-push drill rig using 4-foot long by 1.5-inch diameter drill rods. The sampler was driven into the subsurface to allow undisturbed soil to enter the open MacroCore barrel and retrieved in 4-foot intervals to recover the soil-filled liners.

A lengthwise section of each polyvinyl chloride (PVC) liner was removed with a splitting tool to expose the soil. The soil column was visually inspected for discoloration, monitored for odors, and classified in accordance with the Unified Soil Classification System (USCS). Select intervals were placed in sealable plastic bags and field-screened with a photoionization detector (PID) calibrated to isobutylene.

Soil depths selected for laboratory analysis were sampled directly from the liners using a disposable plastic syringe and retained in two deionized-water-preserved volatile organics analysis (VOA) vials and one methanol-reserved VOA vial in accordance with United States Environmental Protection Agency (EPA) Method 5035 sampling protocol. Samples were also collected by transferring soil into two laboratory-supplied, four-ounce, wide-mouth, unpreserved glass jars, which were sealed with a threaded, Teflon-lined lid. The jars were filled with soil to capacity to minimize headspace and reduce the potential for volatilization. The jars and VOA vials were labeled for identification and stored in an iced cooler. None of the samples exhibited discoloration or an odor and none of the PID readings suggested the presence of elevated volatile organics concentrations.

Soil samples were collected from each boring at 3 to 5 feet bgs.

3.5 Groundwater Sampling

After soil sampling to the terminal depth, a temporary monitoring well was installed within the drill rods by advancing the sampler fitted with an expendable steel point to the terminal depth and retracting the rods to expose a steel well screen. Groundwater samples were retrieved from each temporary monitoring well using a new section of 1/4-inch diameter polyethylene tubing fed through a peristaltic pump and conveyed into five hydrochloric acid-preserved volatile organics analysis (VOA) vials and two unpreserved amber vials. Each vial was filled with no observable headspace or air bubbles to minimize the potential for volatilization, labeled for identification, and stored in an iced cooler.

Groundwater samples were collected from temporary well points TMW-1 through TMW-16 screened from 5 to 9 feet bgs.

3.6 Post-Sampling Activities

Temporary well points were removed from the subsurface and the boreholes were backfilled with clean fine grain sand following sampling activities. Boreholes advanced in improved areas were capped with concrete or asphalt patch to match existing ground cover after being backfilled.

4.0 DATA ANALYSIS

4.1 Laboratory Analysis

Partner collected 16 soil samples and 16 groundwater samples on October 30 and 31, 2023, which were transported in an iced cooler under chain-of-custody protocol to Eurofins Environment Testing Southeast, LLC, a Florida-certified laboratory (National Environmental Laboratory Accreditation Program certificate number E83018) in Orlando, Florida, for analysis. Each soil and groundwater sample were analyzed for total recoverable petroleum hydrocarbons (TRPH) via FL-PRO methodology, VOCs via EPA Method 8260D, and PAHs via EPA Method 8270E selective ion monitoring (SIM). Each soil sample except for soil samples SB-5 and SB-16 were also analyzed for the Resource Conservation and Recovery Act eight-metal suite (RCRA 8 Metals) via EPA Methods 6020B and 7471B. Due to a TRPH exceedance detected in soil sample SB-7, further laboratory analysis for TRPH fractions via TPH Criteria Working Group (CWG) fractionation was conducted.

Laboratory analytical results are included in Appendix B and discussed below.

4.2 Regulatory Agency Comparison Criteria

Chapter 62-777 of the FAC promulgates contaminant Cleanup Target Levels (CTLs) for soil and groundwater as derived by the state. CTLs are presented as numerical concentration values for individual contaminants of concern and apply to site rehabilitation (cleanup) at contaminated sites in Florida. Exceedance of a CTL(s) potentially indicates the release of a contaminant(s) of concern into the environment at levels that would require cleanup, monitoring, and/or restricted land use by the state.

4.3 Soil Sample Data Analysis

The VOC acetone was detected in sample SB-5 at a concentration above the laboratory method detection limit (MDL), and the VOC chloroform was detected above the MDL in soil samples SB-1, SB-10, SB-12, and SB-14. None of the detected concentrations exceeded the Residential, Commercial, or Leachability CTLs. No VOCs were detected above the MDLs in the remaining soil samples.

Sixteen PAHs were detected above the MDLs among soil samples SB-1, SB-2, SB-3, SB-6, and SB-7. None of the individual PAHs for which CTLs have been established exceeded those CTLs.

The detected concentrations of benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were evaluated using the Florida Department of Environmental Protection (DEP) Benzo(a)pyrene Conversion Table. Once converted to benzo(a)pyrene equivalents, none of these PAH concentrations exceeded the benzo(a)pyrene CTL.

Four RCRA 8 Metals (arsenic, barium, chromium, and lead) were detected above the MDLs among the 14 soil samples analyzed for RCRA 8 Metals. None of the detected metals concentrations exceeded the Residential, Commercial, or Leachability CTLs.

TRPH was detected above the MDLs in soil samples SB-4 and SB-7. Of these detections, the TRPH concentration in soil sample SB-7 exceeded the Residential and Leachability CTLs. The concentrations detected in soil sample SB-4 did not exceed the Residential, Commercial, or Leachability CTLs. TRPH was not detected above the MDLs in the other soil samples.

Based on the presence of TRPHs in soil sample SB-7 above the Residential Direct Exposure CTL, this sample was further analyzed for TRPH fractions and compared to individual TRPH fraction CTLs as specified by FDEP. TRPH fractions were not detected above the CTLs in soil sample SB-7. Based on the analytical results, no VOCs, PAHs, RCRA 8 Metals, or TRPH fractions were detected in the soil samples above the CTLs.

Refer to Tables 2 through 4 for a summary of the soil sample laboratory analysis results.

4.4 Groundwater Sample Data Analysis

No VOCs were detected above the MDLs in groundwater samples. The PAH acenaphthene was detected above the MDL but below the Groundwater CTL in groundwater sample TMW-3. No other PAHs were detected above the MDLs in the groundwater samples.

TRPH was detected above the MDLs in groundwater samples TMW-6, TMW-7, TMW-9, TMW-14, and TMW-15. None of the detected TRPH concentrations exceeded the Groundwater CTLs. TRPH was not detected above the MDLs in the other groundwater samples.

Refer to Table 4 for a summary of the groundwater sample laboratory analysis results, respectively.

4.5 Discussion

4.5.1 Soil

TRPH was detected above the Residential and Leachability CTLs in soil sample SB-7. As the TRPH concentration in corresponding groundwater sample TMW-7 does not exceed the Groundwater CTL, TRPH leaching to groundwater in this location is not considered a significant concern. Additional TRPH fractionation analysis of soil sample SB-7 did not detect individual TRPH fractions above the Residential CTLs.

Based on the analytical results, there is no evidence of a significant release of VOCs, TRPH, PAHs, or RCRA 8 Metals to subject property soils as a result of former on-site automobile repair and service activities.

4.5.2 Groundwater

As VOCs, PAHs, and TRPH were not detected in groundwater samples at concentrations exceeding the Groundwater CTLs, there is no evidence of a significant release to groundwater as a result of former on-site automobile repair and service activities. Therefore, Partner recommends no additional investigation regarding groundwater at the subject property.

5.0 SUMMARY AND CONCLUSIONS

Partner conducted a Phase II Subsurface Investigation at the subject property to evaluate the potential impact of petroleum hydrocarbons, volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), and/or metals to soil and/or groundwater as a consequence of a release or releases as a result of former on-site automobile repair and service activities. The scope of the Phase II Subsurface Investigation included a private utility clearance and 16 soil and groundwater borings. Sixteen soil samples and 16 groundwater sample were analyzed for TRPH, VOCs, and PAHs. Fourteen of the soil samples were also analyzed for RCRA 8 Metals.

Subsurface lithology encountered consists predominantly of brown and tan fine- to medium-grained sand from the ground surface to approximately five feet bgs, the maximum depth logged. Groundwater was encountered during this investigation between 5 and 6 feet bgs.

No VOCs, PAHs, or RCRA 8 Metals were detected above the Residential, Commercial, or Leachability CTLs in the analyzed soil samples.

TRPH was detected above the MDLs in soil samples SB-4 and SB-7. Of these detections, the TRPH concentration in soil sample SB-7 exceeded the Residential and Leachability CTLs.

No VOCs, PAHs, or TRPH were detected above the Groundwater CTLs in the analyzed groundwater samples.

TRPH was detected above the Residential and Leachability CTLs in soil sample SB-7. Further laboratory analysis for TRPH fractions via TPH Criteria Working Group (CWG) fractionation was conducted in lieu of this exceedance. Results from the analysis returned favorable concentrations well below the TRPH fractionation SCTLs as allowed by FDEP.

As the TRPH concentration in corresponding groundwater sample TMW-7 does not exceed the Groundwater CTL, TRPH leaching to groundwater in this location is not considered a significant concern.

Therefore, Partner recommends no additional investigation regarding soil at the subject property.

As VOCs, PAHs, and TRPH were not detected in groundwater samples at concentrations exceeding the Groundwater CTLs, there is no evidence of a significant release to groundwater as a result of former on-site automobile repair and service activities. Therefore, Partner recommends no additional investigation regarding groundwater at the subject property.

Notes:
CTLs = Cleanup Target Levels per Chapter 62-777 Florida Administrative Code
* = Leachability values may be derived using the Synthetic Precipitation Leaching Procedure (SPLP)
VOCs = volatile organic compounds
TRPH = total recoverable pertoleum hydrocarbons
RCRA 8 Metals = Resource Conservation and Recovery Act eight-metal suite
EPA = United States Environmental Protection Agency
NA = not applicable
mg/kg = milligrams per kilogram
MDL = laboratory method detection limit
U = not detected above the indicated MDL
I = the reported value is between the MDL and the practical quantitation limit (PQL) and is therefore an estimated value
Bold value = the analyte was detected above the laboratory MDL
Highlighted value = the analyte exceeds one or more criteria

Notes:
CTLs = Cleanup Target Levels per Chapter 62-777 Florida Administrative Code
PAHs = polycyclic aromatic hydrocarbons
SIM = selective ion monitoring
EPA = United States Environmental Protection Agency
mg/kg = milligrams per kilogram
* = carcinogenic PAH concentrations must be converted to Benzo(a)pyrene equivalents for comparision with the appropriate CTLs. See Table 4.
MDL = laboratory method detection limit
U = not detected above the indicated MDL
I = the reported value is between the MDL and the practical quantitation limit (PQL) and is therefore an estimated value
Bold value = the analyte was detected above the laboratory MDL

APPENDIX B: LABORATORY ANALYTICAL REPORTS

eurofins | Environment Testing

ANALYTICAL REPORT

PREPARED FOR

Attn: Steven A Snyder
Partner Engineering and Science, Inc
300 Avenue of the Champions
Suite 160
Palm Beach Gardens, Florida 33418

Generated 11/3/2023 12:25:04 PM

JOB DESCRIPTION

11360 Icot Boulevard, Largo

JOB NUMBER

660-132613-1

Eurofins Tampa
6712 Benjamin Road
Suite 100
Tampa FL 33634

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Job ID: 660-132613-1

Laboratory: Eurofins Tampa

Narrative

Job Narrative
660-132613-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/31/2023 12:11 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.4°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates that the compound was analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Login Sample Receipt Checklist

Client: Partner Engineering and Science, Inc

Job Number: 660-132613-1

Login Number: 132613
List Number: 1
Creator: Redding, Charles S

List Source: Eurofins Tampa

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Narrative

Job Narrative
660-132608-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/31/2023 12:11 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.2°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_SIM: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 670-61224 and analytical batch 670-61375 was outside control limits. Sample matrix interference and/or non-homogeneity is suspected.

Method 8270E_SIM: Surrogate recovery for the following sample was outside control limits: SB-6 (660-132608-6). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method FL_PRO: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 670-61139 and analytical batch 670-61157 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value; value may not be accurate.
U	Indicates that the compound was analyzed for but not detected.

GC Semi VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value; value may not be accurate.
L	Off-scale high. Actual value is known to be greater than the value given.
U	Indicates that the compound was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Project/Site: 11360 Icot Boulevard, Largo

Job ID: 660-132608-2

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
660-132608-7	SB-7	Solid	10/30/23 14:26	10/31/23 12:11

Job ID: 660-132608-2

Laboratory: Eurofins Tampa

Narrative

Job Narrative
660-132608-2

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/31/2023 12:11 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.2°C

GC Semi VOA
Method TPHCWG: The following sample(s) was received outside of holding time: <&commaMerge&>.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: Partner Engineering and Science, Inc
Job ID: 660-132608-2
Project/Site: 11360 Icot Boulevard, Largo

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

INTRODUCTION

This Traffic Impact Analysis (TIA) is provided for the proposed Pinellas County New Campus located at 13600 Icot Boulevard in Clearwater, Florida. To properly address the transportation impacts related to the proposed development in accordance with Forward Pinellas MPO *Traffic Impact Study Methodology*. Kimley-Horn conducted an analysis to follow the updated TIA methodology letter submitted to the Pinellas County on July 11, 2024. The updated methodology letter is provided in **Appendix A.**

The 21.15-acre project site currently has vacant structures and parking. The site is proposed to include up to 317,500 square feet of County administrative buildings upon final buildout of the site. Currently, the County is considering three (3) scenarios for the proposed site layout. The concept plans are attached in **Appendix B** for reference. Each scenario includes an Administration building (120,500 square feet), Justice/Records building (135,000 square feet), and a Development Services building (62,000 square feet).

Upon buildout of the site, access is proposed along Icot Boulevard; however, the proposed access connections vary between the three (3) scenarios being considered by the County. One of the scenarios proposes one (1) full access connection (Access Option 1), and two of the scenarios propose two (2) full access connections (Access Option 2). To provide adequate site circulation, two (2) access connections are preferred, but the number and location of proposed access connection(s) will be determined throughout the development process and based on coordination with County transportation and traffic staff. For either Access Option, it is recommended that the location of the proposed access connection align with the existing driveways along the east side of Icot Boulevard. The project location map is provided in **Figure 1**. The conceptual site plans are included in **Appendix B.**

Project Location Map

PINELLAS COUNTY NEW CAMPUS
PINELLAS COUNTY, FLORIDA

Project No: 241059003	Scale: As Noted	August 2024	Figure 1

A methodology letter was prepared by Kimley-Horn and submitted to the Pinellas County on June 21, 2024. In response to comments from Pinellas County staff, the methodology was revised and resubmitted on July 11, 2024. In general, the following procedural steps were undertaken in this Traffic Impact Analysis:

- Traffic volumes anticipated to be generated by the proposed redevelopment were estimated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition
- Project traffic was distributed and assigned to the public roadway network based upon the distribution reflected from the results of a select zone analysis using the Florida Standard Urban Transportation Model Structure (FSUTMS) District Seven Tampa Bay Regional Planning Model (TBRPM), supplemented with current travel patterns
- Existing a.m. peak-hour and p.m. peak-hour traffic volumes in the study area were collected and adjusted to reflect peak season volumes using the Florida Department of Transportation's (FDOT's) peak season conversion factor (PSCF)
- Work Programs of Pinellas County and the FDOT were reviewed to identify scheduled roadway improvements in the area
- Initial background (non-project) traffic volumes consist of existing traffic grown by an annual growth rate of 3.0%
- Intersection and roadway segment operational analyses within the study area for existing, future background, and future total scenarios were completed using the *Synchro* Version 12, software package and the Pinellas County *2023 Annual Level of Service Report*

PROJECT TRAFFIC

Project traffic used in this analysis is defined as the vehicle trips expected to be generated by the proposed development. These trips were distributed and assigned throughout the study roadway network.

Project Location

The project site is located at 13600 Icot Boulevard in Clearwater, Florida. As shown in the conceptual site plan in **Appendix B**, access to the site is provided along Icot Boulevard.

Proposed Land Use

The project site is proposed to include up to 317,500 square feet of County administrative buildings upon final buildout of the site. The administrative buildings are proposed to include an Administration building (120,500 square feet), Justice/Records building (135,000 square feet), and a Development Services building (62,000 square feet).

Trip Generation

The trip generation potential for the proposed development was calculated based upon rates contained in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition, for the a.m. peak-hour and p.m. peak-hours. The trip generation potential of the proposed development was calculated using the following land use code (LUC):

- 317.5 KSF of LUC 730 (Government Office Building)

Following buildout, the proposed Pinellas County New Headquarters is anticipated to generate 1,060 net new a.m. peak-hour trips (795 entering/265 exiting) and 543 net new p.m. peak-hour trips (136 entering/407 exiting). **Table 1** identifies the a.m. peak-hour and p.m. peak-hour trip generation.

Table 1: Peak-Hour Trip Generation Potential

ITE TRIP GENERATION CHARACTERISTICS						DIRECTIONAL DISTRIBUTION		NET NEW EXTERNAL TRIPS		
						Percent				
Land Use	ITE Edition	ITE Code	Scale	ITE Units	Peak-Hour	In	Out	In	Out	Total
Government Office Building	11	730	317.5	KSF	A.M.	75%	25%	795	265	1,060
					P.M.	25%	75%	136	407	543

Trip Distribution and Assignment

The distribution and assignment of project traffic was performed using the FSUTMS transportation planning model output. The FDOT District 7 TBRPM was used to estimate distribution of project trips. The model output is provided in **Appendix C**.

As previously mentioned, upon buildout of the site, access is proposed along Icot Boulevard; however, the proposed access connections vary between the three (3) scenarios being considered by the County. One of the scenarios proposes one (1) full access connection (Access Option 1), and two of the scenarios propose two (2) full access connections (Access Option 2); therefore, distributions and trip assignments are provided for both access options.

The distribution of net new project traffic, in terms of trip percentages, is shown in **Figure 2.** The a.m. peak-hour and the p.m. peak-hour project traffic is shown in **Figure 3.**

SCHEDULED IMPROVEMENTS

The Pinellas County Public Works Capital Improvement Program, FDOT District 7 Work Program, and developer committed improvements were reviewed for improvements which are currently planned and funded for construction within the buildout time frame in the immediate vicinity of the project site. No geometric improvements were identified during this time period. Therefore, existing lane geometry and traffic controls were used in the analysis for existing and future traffic conditions.

The proposed Pinellas County New Campus is also part of the Forward Pinellas Gateway Master Plan. Though this master plan does not propose capacity improvements along Ulmerton Road, it does propose multimodal transportation improvements related to bicyclist and pedestrian safety, as well as transit.

STUDY AREA NETWORK DETERMINATION

Per the Forward Pinellas MPO *Traffic Impact Study Methodology*, study area roadway segments are defined as the roadway segments where project traffic represents 1.0% or greater of the available roadway capacity up to a maximum radius of two (2) miles from the project site.

As identified in **Table 2**, the following study area roadway segments were included in the analysis:

- Ulmerton Road (Roosevelt Boulevard to 49th Street North)
- Ulmerton Road (49th Street North to US 19)
- Ulmerton Road (US 19 to Belcher Road)

Per the approved methodology submitted on July 11, 2024, the following intersections were included in this analysis:

- Ulmerton Road & Icot Boulevard
- Ulmerton Road & 58th Street N

The study intersections were analyzed for a maximum volume-to-capacity (v/c) ratio by approach, providing that the v/c ratio does not exceed 1.0. *Synchro*, Version 12, was used for the intersection analysis. The study area roadway segments were analyzed for the adopted level of service (LOS) performance standard, LOS D, pursuant to the Pinellas County *2023 Annual Level of Service Report*.

The intersection and roadway analyses were completed for the existing, future background, and future total conditions during the a.m. peak-hour and p.m. peak-hour, pursuant to the updated methodology letter submitted to Pinellas County on July 11, 2024.

Table 2: Study Area Determination

LINK NO.	ROADWAY	FROM	TO	SERVICE VOLUMES		PROJECT TRAFFIC			PROJECT TRAFFIC AS % OF SERVICE VOLUME	SIGNIFICANT ROADWAY SEGMENT?[1]
				EXISTING LANEAGE	LOS D SERVICE VOLUME PEAK-HOUR DIRECTIONAL VOLUME	DIRECTION	PROJECT TRAFFIC %	PROJECT TRAFFIC VOLUME		
1048	Ulmerton Road	Roosevelt Boulevard	49th Street North	6D[2]	3,020	Eastbound	27%	110	3.64%	Yes
						Westbound	27%	37	1.23%	
1051		49th Street North	Project Access	6D	3,020	Eastbound	43%	175	5.79%	Yes
						Westbound	43%	58	1.92%	
1051		Project Access	US 19	6D	3,020	Eastbound	52%	71	2.35%	Yes
						Westbound	52%	212	7.02%	
1049		US 19	Belcher Road	6D	3,020	Eastbound	23%	31	1.03%	Yes
						Westbound	23%	94	3.11%	

1. *Roadway segments up to a maximum radius of two miles from the project site were considered in the study area determination.*
2. *This roadway is listed as a 4-lane divided roadway in the 2023 LOS Report. However, after coordination with Forward Pinellas County staff, this roadway segment is considered a 6-lane divided roadway.*

EXISTING TRAFFIC VOLUMES

Existing traffic conditions were evaluated within the study network for the a.m. peak-hour and p.m. peak-hour. A determination of the impact of the existing traffic on the roadway network was made, including operating conditions for the intersections and roadway segments within the study area. The procedures used in this analysis are discussed below.

Ulmerton Road, from US 19 to 58th Street, is currently a divided roadway with four (4) lanes in the eastbound direction and three (3) lanes in the westbound direction adjacent to the project site. The roadway segment generally runs east/west with a posted speed limit of 45 miles per hour (mph). Vehicle turning movement volume counts were conducted at the study area intersections during the a.m. peak period (7:00 a.m. to 9:00 a.m.) and the p.m. peak period (4:00 p.m. to 6:00 p.m.) on Tuesday, July 23, 2024, to quantify existing peak-hour conditions within the study area. The raw turning movement counts are provided in **Appendix D.**

The vehicle counts at the study intersections were adjusted to reflect peak-season conditions. This modification was performed using the FDOT peak-season conversion factor (PSCF), which corresponds to the data collection date for Pinellas County. These factors are provided in **Appendix D** and the existing seasonally adjusted traffic volumes are provided in **Figure 4**.

FUTURE TRAFFIC VOLUMES

Future traffic volumes consist of two components: project traffic and future background traffic (non-project) traffic estimates. Future background traffic is defined as expected non-project traffic on the roadway network in the future year at buildout of the proposed project. For the purposes of this analysis, it was determined that 2028 would be the buildout year of the development, thus, 2028 conditions were evaluated as the "future" year scenario.

A growth rate was determined by using FDOT historical Annual Average Daily Traffic (AADT) information for three nearby roadway segments of Ulmerton Road (East of US 19), 62nd Street North (North of Ulmerton Road), and 58th Street North (North of Ulmerton Road). A growth rate of 2.73% was calculated; however, a 3% growth rate was applied to the existing volumes to determine future background volumes to provide a conservative analysis. Growth rate calculations are provided in **Appendix E.**

The a.m. peak-hour and p.m. peak-hour background volumes are identified in **Figure 5.** The net, new project traffic volumes identified in **Figure 3** were then added to the background volumes to develop a.m. peak-hour and p.m. peak-hour total volumes identified in **Figure 6.**

The development of existing and future volumes is documented in **Appendix F.**

ROADWAY CAPACITY ANALYSIS

A roadway capacity analysis was conducted for the study area roadway segments based upon the service volumes included in the Pinellas County *2023 Annual* L*evel of Service Report.* The previously identified study area roadway segments were evaluated for existing, future background, and future total volumes during the p.m. peak-hour. The following roadway segments were analyzed:

- Ulmerton Road (Roosevelt Boulevard to 49th Street North)
- Ulmerton Road (49th Street North to US 19)
- Ulmerton Road (US 19 to Belcher Road)

The LOS D service volumes and peak-hour roadway volumes included in the Pinellas County *2023 Annual Level of Service Report* were utilized in the analysis. Since the peak-hour roadway volumes from this document were collected in 2022, the peak-hour roadway volumes were grown by a 3.0% growth rate for six (6) years to determine future 2028 background volumes. Total roadway volumes for the roadway analysis were calculated by adding project traffic to the future 2028 background roadway volumes.

As indicated in **Table 3**, the roadway capacity analysis was conducted for the existing, future background, and future total scenarios. The results of the analysis are summarized in **Table 3** and indicate that the study roadway segments are anticipated to operate at an acceptable level of service, except for Ulmerton Road from Roosevelt Boulevard to 49th Street North and Ulmerton Road from 49th Street North to US 19. Based on the generalized service volume standard thresholds, these segments exceed the LOS D standard during the future background conditions.

However, in existing conditions, the cross section of Ulmerton Road varies along the study roadway segments and is not consistent along the designated links in the Pinellas County *2023 Annual* L*evel of Service Report*. The Pinellas County *2023 Annual* L*evel of Service Report* assumes a cross section of six (6) lanes along the deficient roadway segments on Ulmerton Road from US 19 to Roosevelt Boulevard for purposes of generalized roadway level of service analysis. However, in existing conditions, this section of Ulmerton Road varies between a seven (7) lane and eight (8) lane cross section as outlined below:

- Ulmerton Road from US 19 to 56th Court North: Seven (7) total through lanes with four (4) eastbound through lanes and three (3) westbound through lanes
- Ulmerton Road from 56th Court North to Automobile Boulevard: Eight (8) total through lanes with four (4) eastbound through lanes and four (4) westbound through lanes.
- Ulmerton Road from Automobile Boulevard to Roosevelt Boulevard: Seven (7) total through lanes with three (3) eastbound through lanes and four (4) westbound through lanes

Therefore, the generalized service volume standard thresholds in the Pinellas County *2023 Annual Level of Service Report* underestimate the LOS D capacity along the study roadway segments. Based upon the FDOT 2020 Quality/Level of Service Handbook, a four (4) lane directional roadway has a LOS D capacity of 4,040 vehicles during the peak-hour as shown in **Appendix J**.

As indicated in **Table 4**, the roadway capacity analysis was updated for the existing, future background, and future total scenarios based on the existing cross sections outlined above. The results of the analysis indicate that the study roadway segments are anticipated to operate at an acceptable level of service, except for the eastbound direction of Ulmerton Road from Roosevelt Boulevard to 49th Street North and the westbound direction of Ulmerton Road from 56th Court North to US 19. Based on the updated generalized service volume standard thresholds, these segments exceed the LOS D standard during the future background conditions. No additional roadway deficiencies are anticipated in future total roadway conditions with the addition of project traffic.

Based on the updated generalized service volume standard thresholds, the future total traffic volumes (with project traffic) would not be anticipated to exceed the LOS D service volume threshold if one (1) additional through lane was added in the eastbound direction on Ulmerton Road from Roosevelt Boulevard to Automobile Boulevard and in the westbound direction on Ulmerton Road from 56th Court North to US 19. However, these improvements are not recommended as mitigation because it does not align with the Forward Pinellas Gateway Master Plan. The Forward Pinellas Gateway Master Plan includes a proposed multimodal transportation framework that includes a proposed transit and major roadway improvements within the project vicinity as shown in **Appendix K**. Additionally, the Forward Pinellas Gateway Master Plan includes a proposed enhanced cross section for Ulmerton Road, which is provided in **Appendix L**. Based on these proposed improvements in the Forward Pinellas Gateway Master Plan, enhanced multimodal options will be provided for travel to and from the project site, which is anticipated to reduce the number of vehicle trips generated by the proposed development.

INTERSECTION ANALYSIS

An intersection analysis was conducted during the a.m. peak-hour and p.m. peak-hour for the existing, future background, and future total conditions. The intersection analysis was conducted in *Synchro*, Version 12, software, which utilizes the methodologies provided in the *Highway Capacity Manual (HCM), 6th Edition.* The study intersections were analyzed for a maximum v/c ratio by approach, providing that the v/c ratio does not exceed 1.0.

Existing lane geometry and traffic controls were used in the intersection conditions analysis. Current signal timing information was provided by the Pinellas County and is included in **Appendix H.** As documented in the study area section of this report, the following intersections were included in the analysis:

- Ulmerton Road & Icot Boulevard
- Ulmerton Road & 58th Street N

Existing Conditions Intersection Analysis

Table 5 and **Table 6** summarize the intersection analysis under existing a.m. peak-hour and p.m. peak-hour conditions, respectively. The study area intersections currently operate at an acceptable LOS with each approach demonstrating a v/c ratio of less than one (1.0) under existing conditions.

Table 5: A.M. Peak-Hour Existing Conditions Intersection Operational Analysis

Intersection	Control Type	Existing AM Peak-Hour Conditions (2024) v/c Ratio											
		Eastbound			Westbound			Northbound			Southbound		
		EBL	EBT	EBR	WBL	WBT	WBR	NBL	NBT	NBR	SBL	SBT	SBR
Ulmerton Road & Icot Boulevard	TWSC[1]	0.29	--		--			--		0.03	--		0.16
Ulmerton Road & 58th Street N	Signalized	0.10	0.47	0.47	0.02	0.89	0.47	0.84			0.81	0.87	

1. The *HCM 6th Edition* can only analyze two-way stop-controlled (TWSC) intersections with three (3) or less through lanes along the major roads. Ulmerton Road currently has four (4) lanes in the eastbound direction. Therefore, the intersection of Ulmerton Road & Icot Boulevard was analyzed with three (3) through lanes in the eastbound direction. To accurately analyze volumes reflective of the lane reduction (four (4) lanes to three (3) lanes), the eastbound through volumes were multiplied by 0.75 to adjust proportionately.

Table 6: P.M. Peak-Hour Existing Conditions Intersection Operational Analysis

Intersection	Control Type	Existing PM Peak-Hour Conditions (2024) v/c Ratio											
		Eastbound			Westbound			Northbound			Southbound		
		EBL	EBT	EBR	WBL	WBT	WBR	NBL	NBT	NBR	SBL	SBT	SBR
Ulmerton Road & Icot Boulevard	TWSC[1]	0.35	--		--			--		0.04	--		0.40
Ulmerton Road & 58th Street N	Signalized	0.83	0.73	0.73	0.02	0.66	0.26	0.73			0.71	0.92	

1. The *HCM 6th Edition* can only analyze TWSC intersections with three (3) or less through lanes along the major roads. Ulmerton Road currently has four (4) lanes in the eastbound direction. Therefore, the intersection of Ulmerton Road & Icot Boulevard was analyzed

with three (3) through lanes in the eastbound direction. To accurately analyze volumes reflective of the lane reduction (four (4) lanes to three (3) lanes), the eastbound through volumes were multiplied by 0.75 to adjust proportionately.

2028 Future Background Conditions Intersection Analysis

Table 7 and **Table 8** summarize the intersection analysis under background a.m. peak-hour and p.m. peak-hour conditions, respectively. The study area intersections are anticipated to operate at an acceptable LOS with each approach demonstrating a v/c ratio of less than one (1.0) under future background conditions.

Table 7: A.M. Peak-Hour Background Conditions Intersection Operational Analysis

Intersection	Control Type	Background AM Peak-Hour Conditions (2028) v/c Ratio											
		Eastbound			Westbound			Northbound			Southbound		
		EBL	EBT	EBR	WBL	WBT	WBR	NBL	NBT	NBR	SBL	SBT	SBR
Ulmerton Road & Icot Boulevard	TWSC[1]	0.36	--		--			--		0.05	--		0.20
Ulmerton Road & 58th Street N	Signalized	0.13	0.54	0.54	0.02	0.94	0.49	0.84			0.82	0.88	

1. The *HCM 6th Edition* can only analyze TWSC intersections with three (3) or less through lanes along the major roads. Ulmerton Road currently has four (4) lanes in the eastbound direction. Therefore, the intersection of Ulmerton Road & Icot Boulevard was analyzed with three (3) through lanes in the eastbound direction. To accurately analyze volumes reflective of the lane reduction (four (4) lanes to three (3) lanes), the eastbound through volumes were multiplied by 0.75 to adjust proportionately.

Table 8: P.M. Peak-Hour Background Conditions Intersection Operational Analysis

Intersection	Control Type	Background PM Peak-Hour Conditions (2028) v/c Ratio											
		Eastbound			Westbound			Northbound			Southbound		
		EBL	EBT	EBR	WBL	WBT	WBR	NBL	NBT	NBR	SBL	SBT	SBR
Ulmerton Road & Icot Boulevard	TWSC[1]	0.49	--		--			--		0.05	--		0.53
Ulmerton Road & 58th Street N	Signalized	0.84	0.77	0.77	0.02	0.77	0.30	0.76			0.73	0.94	

1. The *HCM 6th Edition* can only analyze TWSC intersections with three (3) or less through lanes along the major roads. Ulmerton Road currently has four (4) lanes in the eastbound direction. Therefore, the intersection of Ulmerton Road & Icot Boulevard was analyzed with three (3) through lanes in the eastbound direction. To accurately analyze volumes reflective of the lane reduction (four (4) lanes to three (3) lanes), the eastbound through volumes were multiplied by 0.75 to adjust proportionately.

2028 Future Total Conditions Intersection Analysis

Table 9 and **Table 10** summarize the intersection analysis under future total (with project) a.m. peak-hour and p.m. peak-hour conditions. The study area intersections are anticipated to operate at an acceptable LOS with each approach demonstrating a v/c ratio of less than one (1.0) under future total conditions except for the eastbound left-turn during the a.m. peak-hour and p.m. peak-hour and the southbound right-turn during the a.m. peak-hour at the intersection of Ulmerton Road & Icot Boulevard.

The intersection of Ulmerton Road & Icot Boulevard is currently an unsignalized two-way stop control intersection, which is fully built out with an eastbound left-turn lane and a westbound right-turn lane. Therefore, no additional mitigation is feasible if the intersection remains two-way stop controlled.

Signalization of the intersection may improve operations; however, the intersection of Ulmerton Road & Icot Boulevard is approximately 650 feet from the signalized intersection of Ulmerton Road & 58th Street, which does not meet FDOT signal spacing standards. Further coordination between Pinellas County and FDOT is required to determine appropriate mitigation at the intersection of Ulmerton Road & Icot Boulevard and determine if a coordinated signal is feasible.

Table 9: A.M. Peak-Hour Future Total Conditions Intersection Operational Analysis

Intersection	Control Type	Future Total AM Peak-Hour Conditions (2028) v/c Ratio											
		Eastbound			Westbound			Northbound			Southbound		
		EBL	EBT	EBR	WBL	WBT	WBR	NBL	NBT	NBR	SBL	SBT	SBR
Ulmerton Road & Icot Boulevard	TWSC[1]	1.49	--		--			--		0.05	--		0.48
Ulmerton Road & 58th Street N	Signalized	0.19	0.57	0.57	0.02	0.97	0.42	0.84			0.81	0.91	

1. The *HCM 6th Edition* can only analyze TWSC intersections with three (3) or less through lanes along the major roads. Ulmerton Road currently has four (4) lanes in the eastbound direction. Therefore, the intersection of Ulmerton Road & Icot Boulevard was analyzed with three (3) through lanes in the eastbound direction. To accurately analyze volumes reflective of the lane reduction (four (4) lanes to three (3) lanes), the eastbound through volumes were multiplied by 0.75 to adjust proportionately.

Table 10: P.M. Peak-Hour Future Total Conditions Intersection Operational Analysis

Intersection	Control Type	Future Total PM Peak-Hour Conditions (2028) v/c Ratio

		EBL	EBT	EBR	WBL	WBT	WBR	NBL	NBT	NBR	SBL	SBT	SBR
Ulmerton Road & Icot Boulevard	TWSC[1]	+[2]	--		--			--		0.05	--		1.15
Ulmerton Road & 58th Street N	Signalized	0.84	0.77	0.77	0.03	0.90	0.34	0.76			0.72	0.97	

1. The *HCM 6th Edition* can only analyze TWSC intersections with three (3) or less through lanes along the major roads. Ulmerton Road currently has four (4) lanes in the eastbound direction. Therefore, the intersection of Ulmerton Road & Icot Boulevard was analyzed with three (3) through lanes in the eastbound direction. To accurately analyze volumes reflective of the lane reduction (four (4) lanes to three (3) lanes), the eastbound through volumes were multiplied by 0.75 to adjust proportionately.
2. *The HCM 6th Edition resulted in a "+" for this movement's v/c ratio because the computation for this movement is not defined*

TURN LANE EVALUATION

A turn lane warrant evaluation was performed at the proposed project driveway(s) to evaluate the need for exclusive right-turn and left-turn lanes. The analysis was based upon the turn lane warrant thresholds documented in the FDOT *Multimodal Access Management Guidebook,* which utilizes the National Cooperative Highway Research Program (NCHRP) *Publication 457* for right-turn lanes and in NCHRP *Publication 745* for left-turn lanes.

As previously mentioned, upon buildout of the site, access is proposed along Icot Boulevard; however, the proposed access connections vary between the three (3) scenarios being considered by the County. One of the scenarios proposes one (1) full access connection (Access Option 1), and two of the scenarios propose two (2) full access connections (Access Option 2). Therefore, the turn lane analysis was conducted for both access options.

Additionally, to provide adequate site circulation, two (2) access connections are preferred, but the number and location of proposed access connection(s) will be determined throughout the development process and based on coordination with County transportation and traffic staff. Therefore, it is recommended to update the turn lane evaluation at the project driveways once a site plan with final access locations is selected. For either Access Option, it is recommended that the location of the proposed access connection align with the existing driveways along the east side of Icot Boulevard.

Access Option 1

As identified in **Figure 6,** there are anticipated to be 40 and 7 southbound right-turns per hour during the a.m. peak-hour and p.m. peak-hour, respectively, following buildout of the proposed development at the proposed project driveway. An exclusive southbound right-turn lane is not warranted based upon NCHRP *Publication 457*.

As identified in **Figure 6,** there are anticipated to be 755 and 129 northbound left-turns per hour during the a.m. peak-hour and p.m. peak-hour, respectively, following buildout of the proposed development at the proposed project driveway. An exclusive northbound left-turn lane is warranted based upon NCHRP's *Publication 745*. Based upon the FDOT *Florida Design Manual Exhibit 212-1* and a design speed of 30 mph, the required deceleration distance for the northbound left-turn lane is 120 feet. Based upon the reported 95th percentile queue of four (4) vehicles, a queue length of 100 feet is recommended. Therefore, a northbound left-turn lane of 220 feet is warranted at the proposed project driveway.

Access Option 2

North Project Driveway

As identified in **Figure 6,** there are anticipated to be 40 and 7 southbound right-turns per hour during the a.m. peak-hour and p.m. peak-hour, respectively, following buildout of the proposed development at the

proposed north project driveway. An exclusive southbound right-turn lane is not warranted based upon NCHRP *Publication 457*.

As identified in **Figure 6,** there are anticipated to be 239 and 41 northbound left-turns per hour during the a.m. peak-hour and p.m. peak-hour, respectively, following buildout of the proposed development at the proposed north project driveway. An exclusive northbound left-turn lane is warranted based upon NCHRP's *Publication 745*. Based upon the FDOT *Florida Design Manual Exhibit 212-1* and a design speed of 30 mph, the required deceleration distance for the northbound left-turn lane is 120 feet. Based upon the reported 95th percentile queue of one (1) vehicle, a queue length of 50 feet is recommended. Therefore, a northbound left-turn lane of 170 feet is warranted at the proposed north project driveway.

South Project Driveway

As identified in **Figure 6,** there are not anticipated to be southbound right-turns during the a.m. peak-hour or p.m. peak-hour following buildout of the proposed development at the proposed south project driveway. Therefore, an exclusive southbound right-turn lane is not warranted based upon NCHRP *Publication 457*.

As identified in **Figure 6,** there are anticipated to be 516 and 88 northbound left-turns per hour during the a.m. peak-hour and p.m. peak-hour, respectively, following buildout of the proposed development at the proposed south project driveway. An exclusive northbound left-turn lane is warranted based upon NCHRP's *Publication 745*. Based upon the FDOT *Florida Design Manual Exhibit 212-1* and a design speed of 30 mph, the required deceleration distance for the northbound left-turn lane is 120 feet. Based upon the reported 95th percentile queue of two (2) vehicles, a queue length of 50 feet is recommended. Therefore, a northbound left-turn lane of 170 feet is warranted at the proposed south project driveway.

MULTIMODAL REVIEW

Existing and planned multimodal facilities within the vicinity of the proposed development were reviewed. As previously mentioned, the proposed Pinellas County New Campus is part of the Forward Pinellas Gateway Master Plan, and the multimodal transportation in the area is anticipated to be enhanced. An inventory is provided below that includes existing facilities for pedestrians, bicyclists, and transit users.

Pedestrians

There are existing 5-foot sidewalks along the east and west side of Icot Boulevard, adjacent to the project site. Additionally, there are existing 5-foot sidewalks along the north and south side of Ulmerton Road, adjacent to the project site. Internal sidewalks are proposed to be provided within the project site to allow for safe, unobstructed, and efficient pedestrian flow.

Additionally, the intersection of Ulmerton Road & 58th Street currently has crosswalks for pedestrians to utilize when crossing either Ulmerton Road or 58th Street. The traffic signal at this intersection also has push buttons to activate the pedestrian phase within the cycle.

Bicyclists

Exclusive 7-foot bike lanes currently exist on both sides of Ulmerton Road. There are not bike lanes along Icot Boulevard, but bicyclists may travel along the existing sidewalk.

Additionally, the South Gap Pinellas Trail Loop is located northeast of the project site and will be incorporated within the proposed development. Bicyclist will be able to access the site from the trail. The Forward Pinellas Gateway Master Plan proposes additional trails and bike lanes as shown in **Appendix M**.

Transit

Transit service along Ulmerton Road is provided by the Pinellas Suncoast Transit Authority (PSTA). The following PSTA bus routes are identified in the near vicinity of the site:

- Route 59 Commuter Service along Ulmerton Road
- Route 79 Commuter Service along Ulmerton Road
- Express Route 300X along Ulmerton Road

A bus stop is also being considered near/within the project site, which will be coordinated with PSTA.

CONCLUSION

This TIA is provided for the proposed Pinellas County New Campus located at 13600 Icot Boulevard in Clearwater, Florida. Kimley-Horn conducted an analysis to follow the updated TIA methodology letter submitted to the Pinella County on July 11, 2024. The 21.15-acre project site currently has vacant structures and parking. The site is proposed to include up to 317,500 square feet of County administrative buildings upon final buildout of the site. Currently, the County is considering three (3) scenarios for the proposed site layout. Each scenario includes an Administration building (120,500 square feet), Justice/Records building (135,000 square feet), and a Development Services building (62,000 square feet).

Upon buildout of the site, access is proposed along Icot Boulevard; however, the proposed access connections vary between the three (3) scenarios being considered by the County. The number and location of proposed access connection(s) will be determined throughout the development process and based on coordination with County transportation and traffic staff. It is recommended to update the turn lane evaluation at the project driveways once a site plan with final access locations is selected.

Based upon the results of the roadway segment analysis, the study roadway segments are anticipated to operate at an acceptable level of service, except for Ulmerton Road from Roosevelt Boulevard to Automobile Boulevard in the eastbound direction and from 56th Court North to US 19 in the westbound direction. Based on the updated generalized service volume standard thresholds, these segments exceed the LOS D standard during the future background conditions. No additional roadway deficiencies are anticipated in future total roadway conditions with the addition of project traffic. Widening of the deficient segments is not recommended as mitigation because it does not align with the Forward Pinellas Gateway Master Plan. The Forward Pinellas Gateway Master Plan includes a proposed multimodal transportation framework that includes a proposed transit and major roadway improvements within the project vicinity. Additionally, the Forward Pinellas Gateway Master Plan includes a proposed enhanced cross section for Ulmerton Road. Based on these proposed improvements in the Forward Pinellas Gateway Master Plan, enhanced multimodal options will be provided for travel to and from the project site, which is anticipated to reduce the number of vehicle trips generated by the proposed development.

Based upon the intersection analysis, the study area intersections are anticipated to operate at an acceptable LOS with each approach demonstrating a v/c ratio of less than one (1.0) under future total conditions except for the eastbound left-turn and the southbound right-turn at the intersection of Ulmerton Road & Icot Boulevard. Further coordination between Pinellas County and FDOT is required to determine appropriate mitigation at the intersection of Ulmerton Road & Icot Boulevard and determine if a coordinated signal is feasible.

Updated Traffic Impact Analysis Methodology Letter

Kimley»Horn

July 10, 2024

Thomas Washburn, P.E.
Transportation Division Director
Pinellas County Public Works
22211 US 19 N, Clearwater, FL 33765

RE: ***Pinellas County New Headquarters & Downtown Clearwater Redevelopment***
Traffic Impact Analysis (TIA) Methodology
Pinellas County, Florida

Dear Mr. Washburn,

This letter documents the traffic study methodology for the proposed Pinellas County New Headquarters & Downtown Clearwater Redevelopment, which is located at 13600 Icot Boulevard, Clearwater, Florida. The project location map is attached. The project is proposed to consist of approximately 317,500 square feet of County administrative buildings. Currently, the County is considering three (3) scenarios for the proposed site layout. The concept plans are attached for reference. The three (3) scenarios are named 'Supportive Simplicity', 'Green & Active', and 'Thoughtful Citizenship'. Each scenario includes an Administration building (120,500 square feet), Justice/Records building (135,000 square feet), and a Development Services building (62,000 square feet).

Upon buildout of the site, access is proposed along Icot Boulevard; however, the proposed access connections vary between the three (3) scenarios being considered by the County. The 'Supportive Simplicity' and 'Thoughtful Citizenship' scenarios propose two (2) full access connections, while the 'Green & Active' scenario proposes one (1) full access connection. The number and location of proposed access connection(s) will be determined throughout the development process and based on coordination with County transportation and traffic staff.

To appropriately address transportation issues related to this development, Kimley-Horn will conduct an analysis that follows the study methodology detailed below.

Project Trip Generation

The trip generation potential for the proposed development was calculated based upon rates contained in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition, for the a.m. and p.m. peak-hours. The trip generation potential of the proposed development was calculated using the following land use code (LUC):

- 317.5 KSF of LUC 730 (Government Office Building)

Following buildout, the proposed Pinellas County New Headquarters is anticipated to generate 1060 net new a.m. peak-hour trips (795 entering/265 exiting) and 543 net new p.m. peak-hour trips (136 entering/407 exiting). **Table 1** identifies the a.m. and p.m. peak-hour trip generation.

Table 1: Peak-Hour Trip Generation Potential

ITE TRIP GENERATION CHARACTERISTICS						DIRECTIONAL DISTRIBUTION		NET NEW EXTERNAL TRIPS		
Land Use	ITE Edition	ITE Code	Scale	ITE Units	Peak-Hour	Percent In	Percent Out	In	Out	Total
Government Office Building	11	730	317.5	KSF	A.M.	75%	25%	795	265	1,060
					P.M.	25%	75%	136	407	543

Project Trip Distribution

The Florida Standard Urban Transportation Model Structure (FSUTMS) for District 7 was used to determine the project trip distribution. Any manual adjustments will be detailed in the final report. The FSUTMS output is included as an attachment.

Study Area

Per the Forward Pinellas MPO Traffic Impact Study Methodology, study area roadway segments are defined as all segments on the major road network that are impacted by the project's generated traffic at a level equal to or greater than one percent (1.0%) of the maximum service volume of peak hour level of service D up to a maximum radius of two miles from the project site boundary. **Table 2** summarizes the study area determination. The following study area roadway segments will be analyzed:

- Ulmerton Road (Roosevelt Boulevard to 49th Street North)
- Ulmerton Road (49th Street North to US 19)
- Ulmerton Road (US 19 to Belcher Road)

Additionally, the study area intersections are proposed to consist of the project access driveway(s) along Icot Boulevard along with the following intersections:

- Ulmerton Road & Icot Boulevard
- Ulmerton Road & 58th Street N

Table 2: Determination of Study Area

ROADWAY	FROM	TO	SERVICE VOLUMES		PROJECT TRAFFIC %	PROJECT TRAFFIC VOLUME	PROJECT TRAFFIC AS % OF SERVICE VOLUME	SIGNIFICANT ROADWAY SEGMENT?
			LANEAGE	LOD D GENERALIZED PLANNING CAPACITY				
Ulmerton Road	Roosevelt Boulevard	49th Street North	4D	3,020	26%	141	4.7%	Y
	49th Street North	Project Access	6D	3,020	43%	234	7.8%	Y
	Project Access	US 19	6D	3,020	53%	288	9.5%	Y
	US 19	Belcher Road	6D	3,020	24%	130	4.3%	Y

Note: Additional roadway segments are not included in the study due to the maximum radius of 2-miles from the project site boundary.

Background Growth Rate

A growth rate was determined by using FDOT historical Annual Average Daily Traffic (AADT) information for three nearby roadway segments of Ulmerton Road (East of US 19), 62nd Street North (North of Ulmerton Road), and 58th Street North (North of Ulmerton Road). A growth rate of 2.73% was calculated; however, a 3% growth rate is proposed to be applied to the existing volumes to determine future background volumes to provide a conservative analysis. Growth rate calculations are attached for reference. Vested traffic information provided by Pinellas County may be included if requested.

Traffic Analysis

The study area roadway segments will be analyzed relative to the service volumes found in the *Pinellas County 2023 Annual Level of Service Report* (2022 data). The roadway analysis will evaluate study roadway segments for the existing, future background, and future buildout conditions for the p.m. peak-hour. The intersection analysis will be provided for the a.m. and p.m. peak-hours.

Turning movement counts will be collected at the study area intersection for the a.m. peak-hour (7:00 a.m. to 9:00 a.m.) and p.m. peak-hour (4:00 p.m. to 6:00 p.m.). An exclusive turn lane analysis will be completed at the proposed project driveway(s) according to FDOT turn lane criteria.

Multi-Modal Analysis

A multi-modal analysis will be included in the report and will consider bicycle connectivity, transit routes, and pedestrian mobility. The analysis will demonstrate how the project will be connected to any existing pedestrian and bicycle facilities. A multi-modal map will be provided showing the existing sidewalks as well as any proposed sidewalks for this development. Per the comments received by the Pinellas County staff on July 5, 2024, bike trails, specifically Trail Loop corridor, will be identified as well.

Documentation

The results of the traffic analysis will be summarized in a Traffic Impact Analysis (TIA) report. The report will contain supporting documents including turn lane warrants and intersection analyses software outputs. The report will also include text and graphics necessary to summarize the analysis and any assumptions made.

We will follow-up to see if you have any questions regarding this methodology.

Very Truly Yours,

KIMLEY-HORN AND ASSOCIATES, INC.

	7	100	**2000**	FREE	ON
DAY PLAN2					
	1	6	**0700**	FYA	OFF
	2	100	**1900**	FREE	ON

Notes:

FYA PHASE 1 IS TURNED OFF (RUNS PROTECTED ONLY)
EVERY DAY FROM 0700 - 1900 = PLANS 3, 4, 6, 7, 8 & 9 MUST HAVE "SPECIAL FUNCTION 1" CHECKED ONLY ON OLE WHICH IS THE FYA FOR PHASE 1. DO NOT ENABLE SF 1 FOR OLG (PHASE 5) !!!

USES THE FYA "PED PROTECT" PROGRAMMING IN THE FYA OVERLAPS.
PROTECTS THE PEDS ANY TIME A PPB IS PRESSED.
MM, 2, 2 = MAKE SURE "PED PROTECT ENABLE" = "YES" FOR ALL USED FYA'S

*** SEE NEXT PAGE ***

Intersection Summary	
HCM 6th Ctrl Delay, s/veh	47.1
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

HCM 6th Ctrl Delay, s/veh	51.9
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 6th Ctrl Delay, s/veh	48.7
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 6th Ctrl Delay, s/veh	55.0
HCM 6th LOS	E

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary	
HCM 6th Ctrl Delay, s/veh	53.9
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

HCM 6th Ctrl Delay, s/veh	64.8
HCM 6th LOS	E

Notes

User approved pedestrian interval to be less than phase max green.
User approved volume balancing among the lanes for turning movement.
User approved ignoring U-Turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

2020 FDOT Generalized Service Volume Tables

TABLE 7 Generalized **Peak Hour Directional** Volumes for Florida's Urbanized Areas

January 2020

INTERRUPTED FLOW FACILITIES

STATE SIGNALIZED ARTERIALS

Class I (40 mph or higher posted speed limit)

Lanes	Median	B	C	D	E
1	Undivided	*	830	880	**
2	Divided	*	1,910	2,000	**
3	Divided	*	2,940	3,020	**
4	Divided	*	3,970	4,040	**

Class II (35 mph or slower posted speed limit)

Lanes	Median	B	C	D	E
1	Undivided	*	370	750	800
2	Divided	*	730	1,630	1,700
3	Divided	*	1,170	2,520	2,560
4	Divided	*	1,610	3,390	3,420

Non-State Signalized Roadway Adjustments

(Alter corresponding state volumes by the indicated percent.)

Non-State Signalized Roadways - 10%

Median & Turn Lane Adjustments

Lanes	Median	Exclusive Left Lanes	Exclusive Right Lanes	Adjustment Factors
1	Divided	Yes	No	+5%
1	Undivided	No	No	-20%
Multi	Undivided	Yes	No	-5%
Multi	Undivided	No	No	-25%
–	–	–	Yes	+ 5%

One-Way Facility Adjustment

Multiply the corresponding directional volumes in this table by 1.2

BICYCLE MODE[2]

(Multiply vehicle volumes shown below by number of directional roadway lanes to determine two-way maximum service volumes.)

Paved Shoulder/Bicycle Lane Coverage	B	C	D	E
0-49%	*	150	390	1,000
50-84%	110	340	1,000	>1,000
85-100%	470	1,000	>1,000	**

PEDESTRIAN MODE[2]

(Multiply vehicle volumes shown below by number of directional roadway lanes to determine two-way maximum service volumes.)

Sidewalk Coverage	B	C	D	E
0-49%	*	*	140	480
50-84%	*	80	440	800
85-100%	200	540	880	>1,000

BUS MODE (Scheduled Fixed Route)[3]

(Buses in peak hour in peak direction)

Sidewalk Coverage	B	C	D	E
0-84%	> 5	≥ 4	≥ 3	≥ 2
85-100%	> 4	≥ 3	≥ 2	≥ 1

UNINTERRUPTED FLOW FACILITIES

FREEWAYS

Core Urbanized

Lanes	B	C	D	E
2	2,230	3,100	3,740	4,080
3	3,280	4,570	5,620	6,130
4	4,310	6,030	7,490	8,170
5	5,390	7,430	9,370	10,220
6	6,380	8,990	11,510	12,760

Urbanized

Lanes	B	C	D	E
2	2,270	3,100	3,890	4,230
3	3,410	4,650	5,780	6,340
4	4,550	6,200	7,680	8,460
5	5,690	7,760	9,520	10,570

Freeway Adjustments

Auxiliary Lane	Ramp Metering
+ 1,000	+ 5%

UNINTERRUPTED FLOW HIGHWAYS

Lanes	Median	B	C	D	E
1	Undivided	580	890	1,200	1,610
2	Divided	1,800	2,600	3,280	3,730
3	Divided	2,700	3,900	4,920	5,600

Uninterrupted Flow Highway Adjustments

Lanes	Median	Exclusive left lanes	Adjustment factors
1	Divided	Yes	+5%
Multi	Undivided	Yes	-5%
Multi	Undivided	No	-25%

[1]Values shown are presented as peak hour directional volumes for levels of service and are for the automobile/truck modes unless specifically stated. This table does not constitute a standard and should be used only for general planning applications. The computer models from which this table is derived should be used for more specific planning applications. The table and deriving computer models should not be used for corridor or intersection design, where more refined techniques exist. Calculations are based on planning applications of the HCM and the Transit Capacity and Quality of Service Manual.

[2] Level of service for the bicycle and pedestrian modes in this table is based on number of vehicles, not number of bicyclists or pedestrians using the facility.

[3] Buses per hour shown are only for the peak hour in the single direction of the higher traffic flow.

* Cannot be achieved using table input value defaults.

** Not applicable for that level of service letter grade. For the automobile mode, volumes greater than level of service D become F because intersection capacities have been reached. For the bicycle mode, the level of service letter grade (including F) is not achievable because there is no maximum vehicle volume threshold using table input value defaults.
