Topic Proposed Pinellas County Utilites Rate Increases

BCC Agenda Date 6-13-2023

Your Stand on the Issue Oppose

Comments

1st I oppose the water rate increase from the new water smart meters (SM) that are a dangerous, extraneous, excess and unnecessary. I have learned from the history of the electric SM that they are not anywhere close to how they are being nicely presented versus truly they are a huge long term demise to all life with unknown changing frequencies and surveillance capacities that are unregulated. 2nd the analog meters we have are much sturdier, dependable, & long lasting. They provide more jobs to support our community and are safer without the constant 24/7 radiation messaging that causes a slow degradation of people's health that may be unfelt and invisible. However, now 30% and climbing multitude of people are having numerous reactions to these silent killer pulses with: fatigue, headaches, difficulty concentrating, memory loss, irritability, skin problems, dizziness, movement difficulty, depression, hearing disruptions, nausea, heart problems. There are multiple thousands of studies to show these dangerous issues. Please understand The Telecommunications Act of 1996 holds them unaccountable. 3rd please consider other ways to lower the overhead: A) Remove the fluoride: It is a dangerous poison at any level left over from the steel industry. The people were just made guinea pigs to sop up the sludge. Sorry to say the dentists got caught in over their heads from double speak, which they can not save face from at this point. B) Remove the biyearly chlorine It is a toxic, corrosive gas and liquid that we all know as bleach. It is much too strong for our water. The usual chloride is plenty enough.
