Subject: [BULK] Pinellas County Commissioners: it's time to transition to 100% renewable energy NOW!
Importance: Low

CAUTION: This message has originated from outside of the organization. Do not click on links or open attachments unless you are expecting the correspondence from the sender and know the content is safe.

Dear Mr. Dave Eggers,

Dear Commissioner,

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Ms. Kaitlin Green

Dear Mr. Dave Eggers,

The summer was so difficult to enjoy due to Red Tide. As a year round resident and boater I cant imagine living in this beautiful town if we dont jump on this! Our tourists wont come to our beautiful Clearwater if we dont take action!

Dear Mr. Dave Eggers,

We can't wait for others at state or federal level to make and execute the plans that are critical for long term sustainability of our Earth's natural resources or the protection of our homes and economy right here in Pinellas County. Our local economy will be devastated by climate change-driven sea level rise and other impacts and the cost to infrastructure from damages will be in the trillions. We have the opportunity to lead the way for the nation on this, but only if we act now. Please don't push this off onto our children, grandchildren and great grandchildren. Thank you for listening.

Subject: Energy resolution on Tuesday

CAUTION: *This message has originated from outside of the organization. Do not click on links or open attachments unless you are expecting the correspondence from the sender and know the content is safe.*

Chair Eggers,

I submitted a letter to the editor today in regards to the resolution that will be heard on Tuesday, and I wanted to share it with you to show my **support for Ready for 100**.

"Pinellas County, it's our time to shine!

This isn't figurative. On Tuesday, Pinellas County Commissioners will vote on setting tangible, substantial clean energy targets for the most densely populated county in Florida.

And yall, it's time. In Florida we pay 40% more for energy than the average American, and fossil fuel-based energy rates are only set to increase (Re: Higher natural gas costs could hit electric bills, TBT, 11-2-21). Our state has left us with inefficient, ancient, and vulnerable energy infrastructure, but cities and counties are poised to take the lead on demanding better.

Pinellas can create long term, good paying jobs by setting clean energy targets with teeth. We can end our reliance on dirty fuels. We can improve our air and water quality. We can make our neighborhoods, businesses, community centers, and local governments more resilient to intense weather and climate change impacts. And frankly, in the face of skyrocketing energy rate hikes (not to mention those home rentals rates), Pinellas families need a break.

I look forward to the day when I don't cringe with financial anxiety every time the AC kicks on. **Pinellas County Commissioners, give us solar!**"

--

Jessica Lewis, Pinellas County resident

Dear Mr. Dave Eggers,

We need to do our part in Pinellas County to slow down climate change. We are already seeing increased flooding, polluted waterways, worsening red tide and strengthening and more frequent hurricanes. Please support policies that would counter these trends.

Ilene Heinke, District 64

Hello,

I'm a voter in Pinellas County and I wanted to voice my support for this resolution below on the November 9th agenda for Pinellas county to join the Ready for 100 program. This seems like a positive choice to make both fiscally and environmentally.

Thank you,
Robert LaPlante

Dear Commissioner, As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security. The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades. As elected officials you have a moral obligation to heed these warnings. The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial! Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

As a homeowner I have installed solar on my roof, and I expect Pinellas County Commissioners to do their part in moving us to renewable energy. Climate change is upon us now and we ALL need to act accordingly!

I ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible. Thank you,

Mary Hanrahan

Dear Mr. Dave Eggers,

Dear Commissioner,

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Ms. Christine Gasco

Dear Mr. Dave Eggers,

Dear Commissioner,

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Mrs. Erika Howards

Dear Ms. Karen Williams Seel,

If every city does responsible clean energy our planet might just clean up enough, climate change might slow down enough, we might survive and not become extinct in the future. That would be nice!
So in other word cities might be able to do what nations are unable to do!

Dear Ms. Karen Williams Seel,

Clean energy is a requirement for our planet and our future generations. We need to restructure the grid for a more distributed generation of energy and also provide a network for the upcoming era of EVs. This entails detailed and extensive study and commitment. The sooner we get serious, the better off we'll be in our golden years as well as the generations after us.

Thank you,
Brenda Joy King

Subject: [BULK] Pinellas County Commissioners: it's time to transition to 100% renewable energy NOW!
Importance: Low

CAUTION: This message has originated from outside of the organization. Do not click on links or open attachments unless you are expecting the correspondence from the sender and know the content is safe.

Dear Mr. Dave Eggers,

Dear Commissioner,

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Mrs. Penny Lambrianos

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Ms. Pakita Leone

Dear Mr. Dave Eggers,

Please protect and support our environment. It is the reason we have so many tourists = the natural beauty is a huge resource. We implore for 100% clean energy.

Dear Mr. Dave Eggers,

Transitioning to renewable energy makes financial sense and will help us avoid even more catastrophic events resulting from global warming than we are currently experiencing. Global warming is an existential threat to human survival that we ignore at our own peril. Please take action immediately to help lessen the impacts of climate change.

Dear Mr. Dave Eggers,

Dear Commissioners,

We know you are ready to lead the county in working towards a smart vibrant option to power our future now. Solar power is abundant and the most affordable way to produce electricity. It's clean and shines on all, regardless of race, belief, gender, class, income. By Investing in Solar for the region you are investing in high quality local jobs, savings for your residents, life saving technologies, and a fuel source that does not export local dollars to fossil fuel extraction and shipping industries that pollute communities like methane gas and oil. We are here eager to work together, don't wait another day to begin. Julia Herbst

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Ms. Julia Herbst

Dear Mr. Dave Eggers,

I am a lifelong resident of Pinellas county, born in St Petersburg, and lived most of my 60 years in Clearwater. Our county needs this!

Dear Commissioner,

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Ms. Penny Birch-Williams

Dear Ms. Karen Williams Seel,

Good afternnon Ms. Seel,

I'm a long time resident of Pinellas County and have spoken before the commission on several occasions. Usually on animal or pet related matters but felt compelled to reach out to you at this point because the climate affects us all, two legged, four legged, winged, furred or otherwise and am hopeful of your taking an aggressive stance in this matter for the benefit of us all.

Thanks!

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Mr. Robert Rutkowski

Dear Ms. Seel,

Climate chaos is the biggest threat known to humanity, and it's above all an energy emergency. We must rapidly transition off fossil fuels if we hope to avert the most disastrous climate impacts. We have the ability to power our communities with 100% clean, renewable energy more cheaply than with fossil fuels. We need urgent, decisive political action to make this transition.

As Floridians, we are faced daily with the reality our state is on a crash course for disaster if we don't address this looming crisis. Seas are getting higher, days are getting hotter, storms are more frequent and severe, and illnesses are running rampant.

Please be a climate leader and push for:

- A rapid transition of city, state and federal operations and our communities to 100% clean, renewable energy by 2030
- Bold city, state and federal level policies to end the extraction and use of fossil fuels, stop all new fossil fuel infrastructure, eliminate fossil fuel subsidies, and build out the transportation and energy infrastructure necessary for a 100% clean, renewable energy transition
- A just and equitable transition requiring that frontline and marginalized communities, which have historically borne the brunt of the extractive fossil fuel economy, participate actively in the planning and implementation of this mobilization effort and they benefit from the transition to a climate-safe economy

You have the ability to avert disaster if you act now and pursue bold, transformative policy to move us off fossil fuels and onto 100% renewables. We don't have time to waste; please take swift action now.

Sincerely,

Debby Bolen

Dear Ms. Seel,

Climate chaos is the biggest threat known to humanity, and it's above all an energy emergency. We must rapidly transition off fossil fuels if we hope to avert the most disastrous climate impacts. We have the ability to power our communities with 100% clean, renewable energy more cheaply than with fossil fuels. We need urgent, decisive political action to make this transition.

As Floridians, we are faced daily with the reality that our state is on a crash course for disaster if we don't address this looming crisis. Seas are getting higher, days are getting hotter, storms are more frequent and severe, and illnesses are running rampant.

Please be a climate leader and push for:

- A rapid transition of city, state and federal operations and our communities to 100% clean, renewable energy by 2030
- Bold city, state and federal level policies to end the extraction and use of fossil fuels, stop all new fossil fuel infrastructure, eliminate fossil fuel subsidies, and build out the transportation and energy infrastructure necessary for a 100% clean, renewable energy transition
- A just and equitable transition requiring that frontline and marginalized communities, which have historically borne the brunt of the extractive fossil fuel economy, participate actively in the planning and implementation of this mobilization effort and that they benefit from the transition to a climate-safe economy

You have the ability to avert disaster if you act now and pursue bold, transformative policy to move us off fossil fuels and onto 100% renewables. We don't have time to waste; please take swift action now.

Sincerely,

Jan Moore

Subject: Good news & bad news

CAUTION: *This message has originated from outside of the organization. **Do not** click on links or open attachments unless you are expecting the correspondence from the sender and know the content is safe.*

Hi Commissioner Seel,

Hope you are well!

I wanted to pass along some important bad news released yesterday: "[Climate change: IPCC report is 'code red for humanity'](#)".

**The 100% clean energy goals [Resolution] we'd like to see adopted simply recognizes this warning and sets (non binding) goals which align with the scientific targets. Hundreds of cities, counties, states, corporations, other countries have already [made](#) these commitments, including [Tampa](#) just last week, and they're growing their economies, jobs, business opportunities and tax bases in the process!

And some important good news: we have all the tools we need in-hand today to transition to 100% renewables and the endeavor will catalyze an enormous economic expansion. I hope you will take a free hour to watch this important webinar featuring 2 of the foremost experts on this topic, that our Suncoast Sierra Club produced expressly for the BoC in order to impart these brand new realities -

I hope we can earn your support for adopting goals for transitioning to 100% clean energy if we can ever get this onto the BoCC agenda. This is literally a 'nothing to lose and everything to gain' proposition. There are hundreds of million\$ in energy and operational savings to be reaped by switching to lower cost clean energy and efficiency.

Thanks,

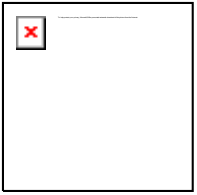

--

Subject: Pinellas County Commissioners: it's time to transition to 100% renewable energy NOW!

CAUTION: This message has originated from outside of the organization. Do not click on links or open attachments unless you are expecting the correspondence from the sender and know the content is safe.

Dear Ms. Karen Williams Seel,

Dear Commissioner,

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.

The good news: we have all the solutions to the climate crisis in-hand today; and clean energy is now cheaper than fossil fuels, and is getting cheaper and more efficient every year! Communities that are proactively transitioning to clean energy are creating jobs, tax revenue, business opportunities and economic growth in the process. The economic benefits of transitioning to renewable energy are substantial!

Pinellas county is on the front lines of climate disruption and both the risks and rewards are magnified for our coastal community. We must join the other 200+ US cities, counties and states across the country - including St Pete, Dunedin, Largo and Safety Harbor - that have committed to transition to 100% clean renewable energy by a date certain!

We ask that you pass the 100% Clean Energy Resolution drafted by the Ready For 100%/Pinellas campaign as soon as possible.

Thank you,

Sincerely,

Mr. Bill Yedkois

Dear Ms. Karen Williams Seel,

Dear Commissioner,

As your constituent I am reaching out to implore you to recognize the dire threats of climate change we now see unfolding across the globe every day. The alarm is being sounded from the global scientific community, the global financial community, our US Departments of Defense and Homeland Security.

The IPCC, the penultimate repository of peer reviewed climate science in the world, has identified clear timelines for transitioning to clean energy in order to avoid catastrophic and irreversible climate disruption, which will require bold action over the next few decades.

As elected officials you have a moral obligation to heed these warnings.
