

Purpose

The Pinellas County Public Works Department (PW) consists of seven divisions that are responsible for managing essential vehicular, pedestrian, and drainage infrastructure, as well as, critical, natural, and urban environmental resources for the residents and visitors of Pinellas County. Public Works provides a diverse portfolio of services such as mowing and urban forestry, mosquito control, traffic control, the monitoring of air and water quality, maintenance and construction of sidewalks, roads, stormwater systems, and bridges, and nourishment of our beaches. PW also plans, design, and constructs capital improvement projects for the County. The department performs these services primarily within the unincorporated area of the county; however, several services are performed at a countywide level. The department strives to be responsive to citizens through community outreach and engagement as well.

For additional information, visit www.pinellascounty.org/PublicWorks.

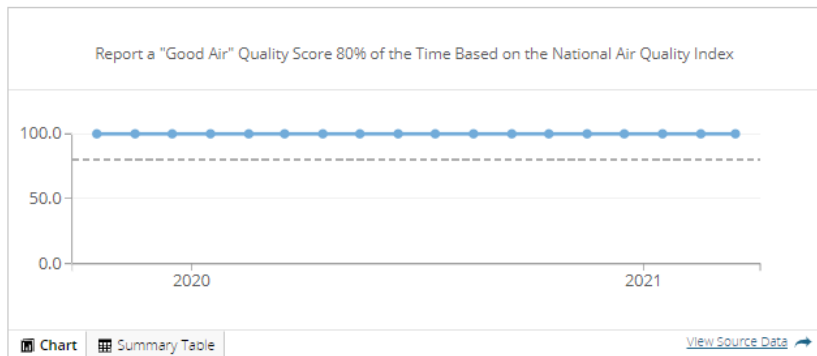

Division of Environmental Management

The Division of Environmental Management is responsible for monitoring and protecting Pinellas County's environmental resources. The division encompasses six work groups including Air Quality, Coastal Management, Ecological Services, Water & Navigation, Water Quality Monitoring, and Watershed Protection. Each group conducts proactive monitoring, responds to citizen inquiries, and manages various projects and permits for the protection of our natural and built environmental resources.

In FY20, Air Quality reported a "Good Air" quality score that was above the target of 80%. The score is based on the National Air Quality Index.

Division of Transportation Operations

The Transportation Operations Division provides design, construction, operation, and maintenance of all traffic control devices. This includes supporting the Advanced Transportation Management System (ATMS)/Intelligent Transportation System (ITS) which enhances mobility for motorists, transit users, pedestrians, and bicyclists.

The department is working to improve transportation infrastructure and traffic flow through several key initiatives, including the strengthening of signal mast arms, development of a Pinellas trails visioning plan, implementation of murals on structures, and more. The department also consistently met its target of repairing 90% of potholes within 72 hours of reporting.

Division of Stormwater and Vegetation

The Division of Stormwater and Vegetation is responsible for mosquito control, vegetation management, urban forestry, and surface water management. Mosquito populations are controlled by best management practices through surveillance, inspection, education, and target-specific treatment for all areas within the political boundaries of Pinellas County. Vegetation Management services include: Urban Forestry; maintenance of desirable vegetation in ponds and permitted sites; and removal and targeted treatment of non-desirable vegetation in the right of way, ditches, ponds, Pinellas County properties and parks, arterial corridors, and unincorporated portions of Pinellas County. Surface water responsibilities include management, operation, and maintenance of the stormwater conveyance system within unincorporated boundaries. It supports the planning, monitoring, evaluation, and implementation of best management practices to improve water quality in compliance with the Clean Water Act.
