Clearwater, FL 33755

Comments I strongly oppose the removal of permits for the removal of healthy trees on residential properties. Regulations are in place that permit homeowners to remove diseased trees or those that pose a risk. Additionally, I am against lowering the fees associated with removing healthy trees. We should implement stricter measures to protect healthy trees, as they play a crucial role in reducing our carbon footprint from fossil fuels, which contribute to increasingly severe weather patterns. Pinellas lost thousands of trees in the 2024 hurricanes; rather than removing more, we should focus on planting more native trees.

Comments I oppose any change in the current tree ordinances. My neighborhood's value lies in its trees. I have four large oaks on my lot. If the trees become dangerous my Arborist and I can evaluate and fix any issue already. If anything I think the penalty for removing a healthy tree should be tripled, and revenue from the fines should go to planting more trees in my area. I am tired of developers and homeowners clearing lots and building zero lot line two story homes that cook our neighborhoods in the summer by absorbing heat that trees would shade us from. Stop the slaughter- or lose the neighborhood's character, beauty, and practical service trees provide- flood/ erosion control, habitat for the native species, shade/ cooling, and beauty. Spend money on educating these new comers to our towns on the benefits of the trees.

Comments After we lost so many trees in the back to back hurricanes in 2024, it's concerning that the county would consider removing the permitting process for the removal of healthy trees on residential property. As a homeowner, I've gone through that permitting process. It was fast, efficient, and reasonable. The regulations we have now work and serve an important purpose (as do our healthy trees!!). Please keep the permitting process and fees in place as they are now. Focus instead on planting more trees! I applaud the county's efforts on Arbor Day to give away trees. Let's build and enhance our tree canopy, not give free rein to people who could chop it all down. PS. Recommended reading - The Lorax.

Comments The current statutes should not be amended to make it easier to remove healthy trees in Pinellas County. Tree removal of diseased and damaged trees is adequately covered in the current law. I have been heartened by the support we have received from the County Commission and County Administration for preserving and protecting our natural and green habitats. This initiative does not do that. I only learned today of this initiative, and do not want to see it advance at this time. Please continue to support preservation of Pinellas County's natural heritage. Thank you, and sincere regards, Tex Carter and the WK Preservation Group

Pinellas County's most irreplaceable infrastructure isn't concrete or steel — it's our mature trees. It's time to STOP THE CHOP, vote down these proposals and start again. ● Mature trees are instant climate infrastructure — replacing them takes decades. ● They reduce heat, flooding, and air pollution right now. ● Canopy lowers heat-related illness, improves neighborhood resilience, and lowers power bills. ● Trees define the streets people love and remember. ● Shaded places are safer and more walkable. Now is the time to protect our existing canopy — especially large, mature, and legacy trees. We all know fines don't work, allowing clear-cutting of most properties prior to development. This needs to end. As such, I strongly oppose these changes as they take us entirely in the wrong direction. The increasing heat and storms destroy businesses, homes and livability. Trees are our most powerful line of defense against the Heat Island Effect we're all experiencing - and the most cost effective. The question shouldn't be "how can we more easily chop trees down", but rather, "how can we incentivize homeowners, developers and builders to increase the protection of trees by retaining and building around them". As such, I strongly oppose both the language and the direction of your proposed ordinances and expect a real effort to make Pinellas the livable county everyone wants. Please feel free to contact me after you vote NO on these proposals and move forward with sincere tree protection. Sincerely, Catherine Harrelson

Comments

Dear County Commissioners, Thank you for the opportunity to comment on the proposed changes to the Pinellas County tree ordinance. I appreciate the County's efforts to update and clarify the code, and I understand the desire to create a system that is predictable and efficient. However, I am concerned that the proposed changes reduce meaningful protections for healthy trees, especially on residential properties. While the ordinance technically keeps tree removal permits and mitigation requirements in place, it weakens how those protections work in practice. The proposed changes make it easier to remove healthy trees when removal is tied to development, and trees located within approved building footprints may be removed without replacement. This approach encourages designing projects around tree removal rather than preservation and incentivizes larger building footprints over more creative siting that could retain healthy, mature trees. As a result, the system shifts away from preserving trees and toward removing them with mitigation. That shift is concerning because tree replacement is not the same as tree preservation. A newly planted 2-inch caliper tree does not replace what a mature tree provides. Mature trees absorb stormwater, store carbon, cool neighborhoods through shade, and provide important wildlife habitat. When a healthy, mature tree is removed, those benefits are lost immediately. Replacement trees may take 20 to 40 years to provide similar benefits—if they survive long enough to do so. The ordinance assumes that planting new trees offsets the loss of existing ones, but it does not account for time delays, cumulative canopy loss, or the high mortality rate of newly planted urban trees. As a result, long-term environmental and public health impacts are overlooked. These concerns are especially important as Pinellas County

faces increasing heat, heavier rainfall, and climate stress. Mature trees are one of the most effective tools we have to reduce flooding, protect public health, and strengthen neighborhood resilience. Policies that make it easier to remove them underestimate their true value. I respectfully urge the County to reconsider this approach and strengthen preservation-first protections for healthy, mature trees, especially on residential properties. At a minimum, the ordinance should recognize that replacement trees do not provide the same benefits as the trees that are removed. Thank you for your time and consideration. Sincerely, Andrea Andersen

Comments I oppose loosening the restrictions for removal of non diseased trees from private property (and public property for that matter). Pinellas County is the most dense county in Florida and we need all the healthy trees we can possibly grow to help clean our air and help with reducing our carbon footprint. I understand that with recent storms the County would like to lessen the costs to homeowners and developers but this is NOT the area to do this. I also DO NOT support reducing the fees to remove healthy trees. Trees are vital to the health of our community and our residents. Please vote NO or Oppose these changes.

Comments Trees are invaluable for a myriad of purposes. They of course provide shade, which helps cool our ever warming environment. They provide a habitat for Pinellas county's wildlife, which is already sadly disappearing. They welcome visitors to our unique area. Locals & visitors rightly expect & NEED Pinellas' variety of native trees!

Topic Protect Pinellas Trees

BCC Agenda Date 1-20-2026

Agenda Item Number 25-2009A, 25-2014A, and 25-2023A

Citizen Name Renee Hansen

Phone +117275439485

Email rha4526@yahoo.com

Address 1105 Varona St
Belleair, FL 33756

Comments I strongly oppose the removal of permits for the removal of healthy trees on residential properties. Regulations are in place that permit homeowners to remove diseased trees or those that pose a risk. Additionally, I am against lowering the fees associated with removing healthy trees. We should implement stricter measures to protect healthy trees, as they play a crucial role in reducing our carbon footprint from fossil fuels, which contribute to increasingly severe weather patterns. Pinellas lost thousands of trees in the 2024 hurricanes; rather than removing more, we should focus on planting new ones.

Comments

Do not allow healthy trees to be removed without a permit or reduce the fees to remove healthy trees. We already have a state law that allows diseased trees and trees that pose a danger to be removed without a permit. Proposed changes would weaken meaningful tree protection standards. Significantly cuts Tree Bank Fund contributions (projected ~60% reduction), undermining the County's ability to replant trees, restore canopy, and invest in underserved neighborhoods most impacted by heat and flooding. Allows payment in lieu of replanting to replace on-site mitigation, which often leads to fewer trees planted where impacts actually occur and weakens ecological and community benefits. Lowers minimum trees-per-lot requirements for residential development, accelerating canopy loss in neighborhoods and increasing urban heat island impacts. Simplifies the tree rating and mitigation methodology in ways that undervalue mature and heritage trees, which provide exponentially greater environmental and public health benefits than newly planted saplings. Shifts critical protections into a new stand-alone Tree Code without strengthening enforcement, creating risk that protections are diluted rather than enhanced. 1.20 Pinellas BOCC Agenda Moves decisions further away from public oversight, limiting opportunities for community input on tree removal that directly affects neighborhood character, safety, and quality of life. 1.20 Pinellas BOCC Agenda Contradicts local climate, sustainability, and resilience goals, as reducing canopy directly worsens heat exposure, stormwater runoff, air quality, and climate vulnerability. Misses an opportunity to strengthen—not weaken—tree protections following increasingly severe hurricanes, flooding, and extreme heat impacting Pinellas County resident

Comments I strongly oppose the removal of permits for removal of healthy trees on residential property, also against lowering fees for removal of healthy trees..we are paving over Pinellas County. & so many neighborhood trees have been destroyed by storms & insurance companies making homeowners removing them. Stand tall like our beautiful trees & keep them thriving by opposing this ordinance...& planting more trees not making it easier to remove them

Comments Trees are a fundamental and necessary part of the life and the beauty of our neighborhoods, towns, open and public spaces. I oppose measures that diminish rather than support the conservation of trees and thus I ask you to vote against 25-2009A and 25-2014A and 25-2023A. Please vote down measures that make healthy trees more vulnerable to removal and make costs to remove trees so minimal compared to the financial and health benefits we receive. The oxygen we breathe, the home for wildlife, the shade from the sun, the appreciation for their beauty, are a few of the benefits along with their environmental economic services, must be supported not lost to our communities.

Safety Harbor, FL 34695

Comments As a Pinellas resident, I personally and vehemently oppose any elimination of the permit to remove healthy trees on residential property. The state already has a preemption that allows homeowners to remove diseased trees or trees that pose a danger. I also oppose reducing the fees to remove healthy trees. We should make it tougher to remove healthy trees as trees reduce our carbon footprint from fossil fuels that are creating more extreme weather patterns. They also provide much-needed shade and shelter in one of Florida's most population-dense counties where we are already extremely short on green space and tree canopy. Please do not make such a short-sighted decision.

Comments I strongly oppose this agenda. Trees in residential areas and in areas being developed need strong protections. I have lived in Pinellas County since 1974, and have witnessed firsthand the urbanization of this beautiful area. I have seen neighbors remove healthy beautiful trees for their aesthetic of monoculture grass. There is no oversight already and so called tree maintenance businesses will just do whatever they want with no regard to existing laws. Removal of trees causes heat from no shade and more electricity is used and AC generators make more heat, so even people who have shade trees are using more electricity! It's a bad circle. For decades, new developments just bulldoze the entire area and take away mature trees, planting small trees after adding asphalt. PCDEP doesn't protect trees like other counties- I am a retired environmental consultant who dealt with this firsthand for years. I personally oppose any elimination of the permit to remove healthy trees on residential property. The state already has a preemption that allows homeowners to remove diseased trees or trees that pose a danger. I also oppose reducing the fees to remove healthy trees. We should make it tougher to remove healthy trees as trees

As a Pinellas County resident, I strongly urge the Council to maintain strict protections for healthy trees on residential property. Florida law already provides homeowners with the ability to remove trees that are diseased or pose a legitimate safety risk, so there is no need to weaken local safeguards further. Reducing or eliminating permit requirements or fees for removing healthy trees would undermine the long-term environmental, economic, and public-health benefits these trees provide to our community. Mature trees reduce urban heat, improve air quality, manage stormwater, and help offset carbon emissions that contribute to increasingly extreme weather events. Healthy trees are a shared community asset, not just a private convenience. Strengthening—rather than loosening—tree protection policies demonstrates responsible leadership and a commitment to sustainability, resilience, and quality of life for current residents and future generations. I respectfully ask the Council to keep strong tree-cutting laws in place and to make the removal of healthy trees more difficult, not easier.

Comments I strongly oppose any revision that REMOVES restrictions or DECREASES fees for the removal of trees. In fact, I strongly believe that we need to INCREASE regulation and greatly INCREASE fees. As an intelligent species who can understand the connection between tree cover and heat, human induced climate change and hurricane strength/frequency ,and plant impact on soil drainage our rules need to reflect that knowledge and provide a better place to live for all residents by PRESERVING our current tree coverage and INCREASING tree coverage with native species.

I am a Native Floridian who was born and raised in Pinellas County. The idea that the Pinellas County Commissioners would ever consider weakening tree protections is not in the best interest of the residents of Pinellas County. The two hurricanes that struck Pinellas County in 2024 were a once-in-a-lifetime weather disaster for the area. If anything, we need more trees than ever before. WE MUST REPLACE THE TREES THAT WERE LOST AND ABSOLUTELY NOT CUT THE TREE BANK FUNDING. I personally oppose any elimination of the permit to remove healthy trees on residential property. The state already has a preemption that allows homeowners to remove diseased trees or trees that pose a danger. I also oppose reducing the fees to remove healthy trees. We should make it tougher to remove healthy trees, as trees reduce our carbon footprint from fossil fuels that are creating more extreme weather patterns. I feel that you should look at the long-term plan of replacing our lost trees and not giving in to a short-sighted plan that overlooks the quality of life for our birds, squirrels, and other wildlife that need trees to live in. In St. Petersburg, Duke Energy has massacred our old trees in an effort to protect power lines. Throughout my childhood, I do not recall ever seeing our trees hollowed out in a V shape as they are now. This weakens the integrity of the trees and is an eyesore to the beauty of nature. You are all responsible for the stewardship of our trees and our environment. If you want to do something constructive, have Duke Energy replace all of the short power poles with taller concrete poles and stop butchering our old, beautiful trees that line the many 100+ year old neighborhoods in St. Pete. Let the hollowed-out old trees fill back in, as I remember them being for most of my life. THINK LONG-TERM. STOP DESTROYING OUR HERITAGE AND LEGACY OF OLD FLORIDA.

Comments I am vehemently opposed to removing any permit to remove healthy trees, any reduction in fines to remove healthy trees on residential properties. My block has lost healthy 4 grand pine trees in the last few months. They all made it thru the storms just fine! One was removed for a neighbor to build a pool. The other 3 were the only trees on the property. In the 25 years I've live here I've seen 5 home on my block remove all the trees on their property or all from their backyard. The last 10 years I've also experienced flooding, not during hurricanes, that flooded my property to the foundation of my home numerous times. The last was 2 weeks before 2024's hurricanes. It flooded both our cars in the drive. We're hotter now, we have flooding now, we have more unhealthy air quality days too. Please help stop the reduction of healthy trees, and work towards planting more trees

Comments My family has lived in Pinellas County for over 25 years. Since moving to our current home, we've noticed over 20 trees removed without replacement. In the past several years, heat, flooding and poorer air quality has increased. Just recently 4 healthy pines were removed. One to make way for a pool (hardscape). I don't think it's a good idea to make it easier to remove the tree that cleans the air and mitigates storm water runoff. Trees removed next door has increased the temperature of our backyard by several degrees. These three proposals should be discarded. They only increase the problems the city has to address.

Comments Pinellas county continues to loose it's trees. Many of the common trees people have removed have been around for many decades; and for some, hundreds of years. Healthy trees are already being removed illegally and there should be penalties in place with tree company being held accountable. These trees have provided shade, cooling, erosion control, clean air, and beauty to county roads and neighborhoods. These plants need protection and free passes shouldn't be handed out to alter Pinellas county's environment and landscape.

Comments I'm gobsmacked that anyone would consider allowing people to remove healthy trees. I'm not sure this is even enforced! But to give it a green light is do incredibly shortsighted. Utterly derelict in maintaining a healthy and livable county. Already Pinellas is too congested and the air quality is less than great. Shade is important. Duke has massacred all the trees along Belcher. Makes me so angry. What are you thinking? Don't uou live in this county?! All the damage from the hurricanes means we need to replenish trees NOT remove them! I just picked one up from the urban forestry team to plant at my church. Eliminating the barriers to protect trees just makes me want to move. Please listen reason and do the right thing. Sheesh.

Comments As a longtime resident of Pinellas County I strongly oppose any weakening of our tree protections. Our mature oaks are one of the things that give our peninsula its special character. When I moved here almost 20 years ago I was struck by the way even a trailer park became more welcoming and home like with the presence of a few grand old oaks. The destruction of any lovely old oak that is healthy or that can be made healthy steals value from every resident who has invested their lives in this community. We need our tree protections to be strengthened, not weakened, because without all the benefits we get from our lovely tree canopy, Pinellas County would be nothing but urban sprawl on a shrinking sandbar.

Comments As a Pinellas resident for 45 years, I personally oppose any elimination of the permit to remove healthy trees on residential property. The state already has a preemption that allows homeowners to remove diseased trees or trees that pose a danger. I also oppose reducing the fees to remove healthy trees. We should make it tougher to remove healthy trees as trees reduce our carbon footprint from fossil fuels that are creating more extreme weather patterns. Vote NO!

We should implement stricter measures to protect healthy trees, as they play a crucial role in reducing our carbon footprint from fossil fuels, which contribute to increasingly severe weather patterns. Pinellas lost thousands of trees in the 2024 hurricanes; rather than removing more, we should focus on planting new ones! I have lived in pinellas county for over 35 years. It's starting not to look like the Florida I once knew. So many unnecessary changes and nothing is being done to try to preserve what our cities used to look like. Old piness and oaks are being torn down and developers are planting 2 palm trees in place of them.

Comments In our area, dozens of trees were removed after the 2024 hurricanes. I'm afraid there is a possibility of tree removal companies feeding into the fears of home owners and exploiting that to their own benefit. I wish I could attach a photo I took of a tree that had been cut down just one street away from me that had a trunk of about FIVE FEET in diameter. It was truly shocking!

This Message Is From an Untrusted Sender

You have not previously corresponded with this sender.

Report Suspicious

I am concerned that some commissioners are in favor of eliminating the county's tree removal ordinance entirely.

Especially in a highly-developed, urban area like ours, the benefits of a healthy tree canopy are essential and extend to all members of the community. Climate change is an additional factor that makes it imperative that we protect and expand the urban forest, not enact legislation that will endanger it.

The amendments to the current tree ordinance have some disadvantages, such as a steep reduction in the amount of funding available to plant native trees and remove invasive species from public areas. However, I believe it is an improvement over the current ordinance, which often dictates unreasonable compensatory actions for those who may have legitimate reasons for removing tree(s) on their property.

Therefore, I support adopting the amended tree ordinance as previously proposed by Building and Development Review Services. I also support increased funding in the county budget for tree planting and invasive removal.

Report Suspicious

I am surprised to see that Pinellas County is considering removing permitting required for tree removal. This is a mistake. Kathleen, this is the current law
Local governments cannot require permits for pruning/removing trees if an ISA certified arborist or FL licensed landscape architect provides documentation that the tree poses an unacceptable risk. No replanting is required.

If you remove this last protection of trees you are telling the voters that trees are not important here in Florida. You are telling the voters in this most densely populated county in FL that you do not value trees.

Here is the simple truth. If you prevent the ground from being hit by the sun, it doesn't heat up as much. If you allow roots to penetrate the soil and break up the ground, water can infiltrate and does not run off as much.

Trees can reduce as much as 20,000 pound of CO2 in a year, not to mention stormwater runoff and rainfall intercepted. Trees remove sulphur dioxide and remove ozone pollution. So yes, as many protections on trees as possible are what we need.

We need to breathe. We need to avoid rainwater runoff and flooding. Trees are necessary.

Please take 3 minutes to read this UF article about trees and their value to Florida.

<https://blogs.ifas.ufl.edu/sarasotaco/2023/08/10/climate-solutions-planting-trees/>

Please take a moment to become informed on the value of trees.

Comments As a Pinellas resident, I strongly oppose eliminating the permit requirement for removing healthy trees on residential property. Florida law already allows homeowners to remove diseased or dangerous trees, so there is no justification for weakening local protections. I also oppose reducing the fees associated with removing healthy trees. In fact, we should be making it more difficult to remove healthy trees, as they play a critical role in reducing our carbon footprint and mitigating the extreme weather patterns driven by fossil fuel emissions. Additionally, there should be a mandatory requirement that any removed healthy tree be replaced with a new, native tree. Native species support our local ecosystems, strengthen climate resilience, and help preserve the natural character of our communities.

Comments Trees are already not protected enough. A while ago a contractor proposed removing five protected pines, no questions no permits needed. However, I wanted to do my due diligence and eventually removed them because of the arborist explaining the reason. There are too many contractors that will just cut down trees without respect or consideration. The rules are lax as it is and not being enforced. Making it even easier to remove trees is another step in the wrong direction. It is very important to have shade to protect from extreme heat and other weather events. just compare the heat in neighborhoods with lots of shade versus no shade. The difference is easy to see. Besides, shade trees also increase property value; nice neighborhoods have more trees as many people do like reduced cooling costs in the summer and not walking outside the front door into an oven.

Comments	I vehemently oppose the proposed new tree ordinance. Most cities are rapidly increasing their tree canopies to fight global warming. It is crazy to advocate removing any trees, except for "trash trees" like carrotwood trees!

Comments My parents were Pinellas residents, and as an overseas resident I vote in Pinellas County. I personally oppose any elimination of the permit to remove healthy trees on residential property. The state already has a preemption that allows homeowners to remove diseased trees or trees that pose a danger. I also oppose reducing the fees to remove healthy trees. We should make it tougher to remove healthy trees as trees reduce our carbon footprint from fossil fuels that are creating more extreme weather patterns.
