ESTIMATE

Services	qty	unit price	amount
Install water connection from meter to be installed at the street. We will install 1" schedule 40, very strong PVC, coming from the meter and to where we choose to place the valves which may be in the middle of the property next to/ near monument wall.	1.0	\$450.00	\$450.00
Installation of Zone #1 of #2: Bubblers running to half of the installed trees on one side of the property. We are going to install 1" PVC for the entire length of the zone for the amount of water needed and going the distance to the back that we would be going. The bubblers would be then placed on flex pipe and then installed to lay just on the drip line of the tree. We do this because of when the tree grows, it's naturally going to expand in trunk size, therefore we want to anticipate that need and all the while providing ample water to the roots system of each individual tree planted. Each tree, we will build " Earth Circles" using the dirt at the base of each tree. Essentially making a bowl made of dirt to keep the water around the base of the tree and not running off to the side and into the grass. The very same process will be done on the other zone as well. *** TO ADD: The one inch pipe will run down the center of the property towards the end of the property. Now we aren't trying to succeed in covering a large space of area, but we are trying to actually get water to individual planted trees. That one inch pipe will be T'd off to each side of property on its own zone line. And to keep the pressure at maximum level, we will run the one inch until we get close to the actual trees then install off a reducer a piece of flex pipe with a .50 GPM bubbler emitter on it. Over the course of a 20min watering cycle with a max of 10 trees on the zone each tree at 20min will receive 10 gallons of water. Again that is using 1" pipe on all lateral lines as well with a reduction to 1/2". This precipitation rate applies to both zones as they are doing the exact same thing.	2.0	\$1,250.00	\$2,500.00
Irrigation Controller: We will not be using the traditional plug in powered timer. We will be utilizing a Hunter Node battery operated and weather tight timer. This eliminates the need to have an electrical hooked up. Plan to program for #2 days a week, set to run around 3:30am to 4:00am. The reason we set at that time is so the sun doesn't evaporate the water quickly if we were to run in the day time. Price of timer is contractor price	1.0	\$210.87	\$210.87
Installation of hose bib at ZERO cost. We will install spigot in a secure area of the property for use.	1.0	\$0.00	\$0.00
***(something i missed putting on estimate) Must install a pressure reducer for the lines. Why a pressure reducer matters for bubblers Most bubblers (especially adjustable or multi-stream) are designed to run best at 25–30 PSI. Standard residential water pressure is often 50–70 PSI. At higher pressure: Flow is harder to control — you barely touch the adjustment screw and it jumps from a trickle to a geyser. Streams get turbulent, causing erosion around the base of the tree. You wear out the internal parts faster.	1.0	\$375.00	\$375.00

Lifetime Vertical Plastic Shed Kit (60326)

The Lifetime Vertical Plastic Shed is UV-protected and weather resistant shed. The shed includes two height adjustable shelves gives enough space for other bigger items like rakes, brooms, shovels, storage totes, bins and even most push mowers. Constructed of durable, steel reinforced walls, pad lockable doors (pad lock not included) with high impact plastic flooring. Lifetime Vertical shed is a space saver shed perfect for small spaces.

Lifetime Vertical Storage Shed - Features an interior capacity of 51.25 cubic feet. Desert Sand and a brown top. Includes (2) 30 x 10 inch shelf. Comes in (1) box. 5-year limited warranty.

Features

Accommodates Standard Push Mowers up to 24" in Width

Easy to Clean Material

Impact Resistance Protects from Cracking, Chipping, and Peeling

Low Maintenance Design

Padlock Loops for Additional Security (lock not included)

Slider Latch Locking System

Stain Resistant Floors and Walls

Steel Reinforced for Greater Strength and Durability

Two Adjustable Shelves for Versatile Storage Capacity

UV Protected to Prevent Fading

Weather Resistant Construction

Features & Benefits

Adjustable Shelving

Includes two 30 in. x 10 in. shelves that can be spaced to fit a variety of items along the back wall

Assembly

Secure-Fastened Assembly with High-Grade Metal Screws

Attractive Exterior

UV-protected to help prevent fading and cracking. Stain-resistant exterior never needs painting.

Door Handle

High-Impact Handles with Metal Latch

Lock Loop with Two (2) Deadbolts on Interior of Left Door

Door Structure

Steel-Reinforced Polyethylene

Lockable Doors
