## 1.0 BCC TSC Business Case Overview

To effectively manage technology expenditures, the BCC Technology Steering Committee (BCC TSC) needs to be able to evaluate requests in a consistent and logical manner. The objective is for the BCC TSC to commit to efforts that bring the most value to the citizens and employees of the county at the lowest reasonable risk. To help achieve this evaluation, the Office of Management and Budget (OMB), with input from Business Technology Solutions (BTS), has established a standard format for use by agencies in developing a business case.

Business cases should be submitted for any project that exceeds 200 ROM hours or \$10,000. Projects below this threshold do not need to complete a business case. Those projects will be addressed by BTS directly and prioritized as resources are available.

The completion of the Business Case is the responsibility of the requesting department. Each department will fill out the items in the Business Case designated as "Business" items. Technical components of the Business Case will be filled out by BTS staff, and any assistance with Quantitative Benefits (section 5.5) will be provided by OMB.

The Business Case has been color coded to help make it more user-friendly. The Business items are highlighted yellow, the BTS items are highlighted blue, and if items relate to both the Business and BTS they are highlighted green.

The scores on the business case are used to populate a Decision Square which scores the request in terms of Value and Risk. Value should be maximized so the maximum number of points is 100. Risk should be minimized so the best possible score is zero. Projects that are scored as high value and low risk will have a good chance of being approved. Conversely, projects that are scored as low value and high risk will not have a good chance of being approved.

Detailed instructions for completing the Business Case are contained in a separate document named <u>BCCTSC Business Case Instructions & Terminology</u>.

## 2.0 Request Identification (Business to complete)

## 3.0 Request Background (Business to complete)

Briefly describe the following:

Q1. What is the business problem or opportunity this request addresses?

A1. The County seeks to provide an Enterprise level solution to Asset Management through a single solution to optimize asset longevity, minimize life-cycle costs, forecast and prioritize capital expenditures, control risk to acceptable levels, deliver sustainable levels of service, focus limited resources through root cause and spatial analysis, provide performance indicators to drive fact-based business decisions, expand field mobility, share resources across department boundaries, and retire legacy systems.

Q2. How is the problem currently being addressed?

A2. The departments impacted are currently using multiple independent disparate applications and databases. Hardware to support some of these systems, specifically Maximo 4.0.3 used by Utilities Water & Sewer and REM Star Center, is in need of immediate replacement and subject to failure at any time. Also, this software version is no longer supported by the vendor. Workflow and asset standards, where they exist, are not systematically applied in a uniform business approach.

Q3. What non-technology solutions have been considered?

A3. None

Q4. What will happen if we do nothing?

A4. By not implementing an enterprise-wide approach to asset management, County programs face potential accelerated asset failure, increased risk and liability, regulatory non-compliance, inefficient resource allocation, and less effective scheduling and planning. In addition, opportunities to reduce long-term costs in capital planning and maintenance will not be realized.

Failure of existing Maximo 4.0.3 systems is expected to cause the following: data and functionality loss, increased operations and maintenance cost, increased replacement frequency and costs, reduced customer loyalty and satisfaction.

Q5. Is this request a phase of a current project initiative or new?

A5. This request is the Implementation Phase of the current Enterprise Asset Management project, consolidating the participating departments from multiple current work management systems to a uniform enterprise asset management approach.

Q6. Is this request being pursued for the current and/or a future budget year?

A6. Yes, Both

## 4.0 Request Summary (Business to complete)

In this section briefly describe the proposed solution, focusing on the benefits. This is an opportunity to supplement the information in the rest of the business case. Please do not exceed one page.

Pinellas County Government has been entrusted by its citizens to provide *sustainable service levels* and to exercise sound judgment to *optimize infrastructure longevity*. The financial constraints of recent years have enabled the County to seek more efficient and effective processes to provide these products and services. The Enterprise Asset Management Project explores the opportunity to implement an enterprise asset managment solution, to more effectively manage the life cycle of the physical and infrastructure assets and their associated costs to *achieve a desired level of service at an acceptable level of risk.* 

Asset repairs and failures can be significantly reduced providing *greater continuity of services* and *mitigating risk* with an emphasis on planned maintenance. Assessing asset condition at regular intervals facilitates early *lower cost repairs*, *extends asset life* and allows for *asset longevity projections*. Long term budget financial impacts of up to 25 - 40 years in advance can be forecasted by *aggregating asset replacement costs* in fiscal year intervals. These projections enable *financial planning* to cover large capital expenditures for infrastructure replacement using diverse financial strategies.

Implementing enterprise level business processes and industry best practices helps to assure consistent service delivery, results in more efficient use of resources, and increases customer satisfaction. Data integrity improves with consistent business processes, establishment of a single point of data entry, and automated data collection. Practicing root-cause analysis aided by spatial analysis through GIS leads to more focused allocation of resources to resolve recurring problems and issues impacting large numbers of citizens.

The *mobility* capabilities empower the field employees to capture and utilize *real time information* and see the impact of their efforts on organizational performance.

Data analysis will provide the *true cost of business*, allow for *fact-based decision making*, development of *performance metrics*, enabling *improved cost control* and performance measures.

Implementation of EAM solution will serve as the foundational building blocks of *transforming the operational approach and business philosophy* from a work management approach to an enterprise asset management practice. The proposed and ongoing *cost of this project* amounts to *less than 1% of the total \$4.0 Billion asset value managed by the participating departments (Util, SW, PW, REM and PCR).* 

In the case of current Maximo 4.0.3 systems, upgrading is not a matter of 'if', but rather 'when'. The longer implementation is delayed, the greater the risks of catastrophic system failures. *Consequences to the business* include asset failures and liabilities, regulatory violations, delayed services, damaged reputation, data loss for billing accountability, loss of revenue, inaccurate financial cost allocation, and decreased productivity.

The attached developed business case will reflect the compelling value of benefits to be realized by implementing the proposed system, while considering the associated risks.

## 5.0 Value Factors

#### 5.1 Business Strategy Alignment (Business to complete)

Q1. How does the request align with Strategic Focus Area goals? Explain

A1. The EAM project aligns with all five of the County's Strategic Plan focus elements: 1) Create a Quality Workforce in a Positive Supportive Organization, 2) Ensure Public Health, Safety, and Welfare, 3) Practice Superior Environmental Stewardship, 4) Foster Continual Economic Growth and Vitality, and 5) Deliver First Class Services to the Public and Our Customers. As shown in Section 5.5.4 Project Benefits, the EAM project contributes significantly to each of these strategic areas.

| Highlight the appropriate answer below                                 | Value points | Score |
|--|--------------|-------|
|  |              |       |
| No clear alignment with Strategic Focus Area (SFA) Business Plan Goals | 0            |       |
| Some alignment to Strategic Focus Area (SFA) Business Plan Goals       | 3            |       |
| Significant alignment with Strategic Focus Area (SFA) Business Plan    |              |       |
| Goals  | 6            | 6     |

#### 5.2 Business Impact (Business to complete)

Q1. Does this request only affect/benefit your department? (If yes, skip Q2 & Q3)

A1. No. This is an enterprise level project initially impacting over 1,100 stakeholders.

Q2. Does this request affect/benefit multiple departments? (If yes, list which ones)

A2. Yes. Core participants include the Utilities, Solid Waste, Public Works, Real Estate Management, Parks & Conservation Resources.

Q3. Does this request affect/benefit the entire organization? (If yes, describe how)

A3. Yes. All County departments will be participating in generating service requests. Additionally, opportunities are envisioned for other departments.

| Place the appropriate number of value points in the Score cell | Value points | Score |
|--|--------------|-------|
| Single Department  | 4            |       |
| Multiple Departments   | 8            |       |
| Organization-wide (Enterprise)                                 | 12           | 12    |

#### 5.3 Citizen Facing (Business to complete)

Q1. Is this request for technology 'Citizen Facing', i.e. does it directly serve the public? Explain. A1. 1) Implementation of this project will serve the public by providing direct electronic interface to convert email complaints into service requests. Information and data generated by the EAM system will feed County web sites, publications, and communications that target the citizens of Pinellas County. The use of EAM will be transparent for stakeholders and public.

| Highlight the appropriate answer below           | Value points | Score |
|--|--------------|-------|
| No   | 0            |       |
| Yes, it provides some value to the public        | 5            |       |
| Yes, it provides significant value to the public | 10           | 10    |

## 5.4 Qualitative Benefits (Business to complete)

| If the answer is no, skip to next questions. If the answer is yes, provide an explanation<br>and fill in the appropriate score. The scoring is all or nothing.  | Score |
|---|-------|
| Q1. Helps the department meet a major goal or initiative.   | 4     |
| A1. Yes. This project aligns core departments with County Strategic Directions as stated in 5.1. EAM extends asset life, produces business process efficiencies, engages employees, and results in capacity building and reallocation of resources.   | 4     |
| Q2. Supports mandatory functions or activities.   | 4     |
| A2. Yes. Mandatory programs for the core departments include: Transportation/Stormwater/Drainage Capital Improvement, Road/Stormwater/Tree/Permitted Facilities Maintenance, Mowing, Sweeping, Vegetation and Mosquito Control, Traffic Sign and Signal Maintenance, Air Quality, Court Facility Maintenance, and Water and Sewer, and Solid Waste. These mandated programs protect public safety and secure public health. | 4     |
| Q3. Increases workload capacity or simplifies business processes.   | 3     |
| A3. Yes. Documents and Standardizes workflow, streamlines business processes, enables sharing and improved allocation of resources. Builds capacity through increased efficiencies by leveraging integration with GIS and mobility capability. Supports effective long term planning and sustainability efforts.  | 3     |
| Q4. Improves performance.   | 3     |
| A4. Yes. Enables mobile functionality, increases work productivity, optimizes asset function and performance, facilitates continuous improvement, and validates established levels of service.  | 3     |
| Q5. Enhances customer service (internal or external).   | 3     |
| A5. Yes. The project enables real time responses to external and internal customers. Customers can send their comments and complaints electronically at their convenience. Provides consistent and reliable data to internal customers and auditors.  | 3     |
| Q6. Improves ability to measure performance.  | 3     |
| A6. Yes. Advanced reporting and multi-system integration will allow the County to move from output to outcome based performance measurement.  | 3     |
| Q7. Improves management information and enhances decision-making.   | 3     |
| A7. Yes. Real time data availability and condition monitoring capability will allow tracking and optimization of asset life-cycles. This will support informed decision-making regarding the balance of maintenance vs. replacement. Key performance indicators displayed on dashboards will facilitate information sharing throughout the organization.  | 3     |
| Q8. Improves accuracy of data or information.   | 3     |
| A8. Yes. Documented Standardized business processes, asset management practices, enterprise asset classifications, application interfaces, and mobile data input will preserve data integrity and provide consistent data analysis.   | 3     |
| Q9. Improves program budgeting or activity based costing.   | 3     |
| A9. Yes. Operating and Capital budgeting will be supported by life-cycle optimization and risk mitigation,<br>Enables tracking of costs for services, materials, tools and labor by activity, location, GL account, or asset.   | 3     |
| Q10. Improves transparency and accountability.  | 2     |
| A10. Yes . Participating departments will utilize standardized business processes to allow uniform data collection and reporting. Data transparency across the enterprise will encourage greater accountability and identify opportunities for collaboration.   | 2     |
| Q11. Improves or allows for internal and/or external information sharing.   | 2     |
| A11. Yes. GIS capabilities will enhance spatial representation of data to internal and external customers to group work geographically and minimize travel time. Information sharing will allow departments to coordinate and schedule projects more effectively.   | 2     |
| Q12. Helps meet industry best practices.  | 2     |
| A12. Yes. Asset Management solution, along with GIS will facilitate the maintenance needs of County infrastructure. Asset Management is a globally recognized industry best practice.   | 2     |
| Total Qualitative Benefits  | 35    |

#### 5.5.1 Quantitative Benefits Summary

The purpose of the Quantitative Benefits (section 5.5) of the Business Case is to attempt to analyze the financial impact of the proposed project. The 3 main items that will be addressed are:

(1) BTS Costs - include one-time costs such as software, hardware, and implementation costs as well as recurring ongoing support costs.

(2) Business Costs - include one-time and recurring costs to a department from implementing a new technology project. If grant funds or other outside funding (such as intergovernmental) are secured, show as a negative cost at the bottom.

(3) Project Benefits - include savings or cost avoidance that are expected to be realized by the project, starting after project completion.

These 3 items are summarized in the Quantitative Benefits Summary below that will feed section 5.5 in the Business Case. The information below does not need to be

| Internal Rate of Return(IRR) | 25.2% |
|------------------------------|-------|
|------------------------------|-------|

| Project Benefits as % o | of Total     |
|-------------------------|--------------|
| Project                 | Costs 190.3% |
