WITNESSETH:

WHEREAS, the County requested proposals pursuant to <u>21-0091-B</u> (previously 190-0545-B) ("ITB") for <u>Wastewater Polymers</u> services; and

WHEREAS, based upon the County's assessment of Contractor's proposal, the County selected the Contractor to provide the Services as defined herein; and

WHEREAS, Contractor represents that it has the experience and expertise to perform the Services as set forth in this Agreement.

NOW, THEREFORE, in consideration of the above recitals, the mutual covenants, agreements, terms and conditions herein, and other good and valuable consideration, the receipt and sufficiency of which is hereby mutually acknowledged, the Parties agree as follows:

STATEMENT OF WORK

SPECIFICATIONS

A. BACKGROUND

Polymers are used by Pinellas County to thicken and dewater biosolids generated during the wastewater treatment process. Polymers allow water that convey the biosolids to be more easily removed using mechanical equipment, such as rotary drum thickeners, belt filter presses or centrifuges making the remaining biosolids less costly to transport, aids in further processing in the digesters and is significantly more energy-efficient than thermal means to be able to 100% beneficially reuse the biosolids as Class AA fertilizer. Polymer ingredients may not affect facilities' abilities to meet toxicity requirements.

The County utilizes polymers at four (4) different wastewater treatment processes:

1 and 2: the thickening and dewatering centrifuge areas at the South Cross Bayou Advanced Water Reclamation

Facility (SCBAWRF).

3 and 4: the thickening and belt filter press areas of the William E. Dunn Water Reclamation Facility (WEDWRF)

Each facility has independent requirements. Bidder shall acquaint themselves and be familiar with the conditions and operational procedures established and accepted within each treatment facility area during the mandatory pre-bid testing phases. Bidder will be asked to supply sufficient quantities of polymers to allow testing at both facilities for bench scale and then, if applicable, full plant scale testing.

Location	Address	Estimated Annual Quantity					
South Cross Bayou Advanced Water Reclamation Facility	7401 54 th Avenue N St. Petersburg, Florida 33709	10,100 dry tons (Rotary Drum Thickener) 4,500 dry tons (Dewatering Centrifuge)					
William E. Dunn Water Reclamation Facility	4111 Dunn Drive Palm Harbor, Florida 34683	2,000 dry tons (Belt Filter Press) 2,100 dry tons (Rotary Drum Thickener)					

B. PROCESSES

1. South Cross Bayou Advanced Water Reclamation Facility:

a. Thickening:

- i. Thickening of sludge is accomplished in a rotary drum thickener (RDT).
- Blended emulsion polymer is injected through a poly-blend mixing system into a flocculation tank.
- iii. Primary and waste-activated sludge is blended by mixers then fed to the RDTs at a variable feed rate of 0.5%-1.4% solids concentration.
- iv. Thickened sludge from the RDT process is fed directly to two anaerobic egg-shaped digesters (ESD) and is gravity fed from the ESDs to a gas sludge holding tank.

STATEMENT OF WORK

b. Dewatering:

- i. Dewatering of bio-solids is accomplished by pumping anaerobic digested sludge from the gas sludge holding tank to feed one, two, or three dewatering centrifuges at a variable feed rate of four (4%) to five (5%) percent solids concentration.
- ii. Dry micro-bead polymer is injected through a poly-blend mixer system into blending tanks; once blending has been completed the concentrated liquid polymer is transferred to an aging tank for storage.
- iii. The concentrated liquid polymer is then injected into the feed tubes of the operating centrifuges to produce cake bio-solids concentration range of twenty to twenty-four (20% 24%) percent.
- iv. The dewatered bio-solids are then conveyed to a blending hopper and fed into a pelletizing process for final disposal and distribution

2. William E. Dunn Water Reclamation Facility:

a. Thickening:

- i. Thickening of sludge is accomplished by one of two RDTs.
- Blended emulsion polymer is injected through a poly-blend mixing system into a flocculation tank.
- iii. From the flocculation tank the flocculated sludge flows to the RDT and from RDT thickened sludge flows by gravity into aerated sludge holding tanks.
 - iv. The RDTs, put online in 2019, receive about eighty (80%) percent of the wasted sludge flow with about twenty (20%) percent of the flow being used as dilution water.
 - v. The RDT (average feed of 126 gpm) produces a thickened sludge with a seven (7%) percent solids concentration.
 - vi. The remainder of the wasted sludge flow (average of 15 gpm) bypasses the RDT and flows directly into the sludge holding tanks.
 - vii. This waste activated sludge flow, with a solid's concentration of zero point five to zero-point seven (0.5-0.7%) percent is used to dilute the thickened sludge.
